# Production Part Approval Process

**Definition:** The Automotive Industry Action Group (AIAG) Production Part Approval Process (PPAP) is an industry standard that outlines the process to demonstrate engineering design and product specifications are met by the supplier's manufacturing process. PPAP principles help reduce delays and non-conformances during part approval by providing a consistent approval process.

**Purpose:** "To provide the evidence that all customer engineering design records and specification requirements are properly understood by the organization and that the manufacturing process has the potential to produce product consistently meeting these requirements during an actual production run at the quoted production rate." (AIAG PPAP Manual 4<sup>th</sup> Edition)

# PPAP Resources

This training will provide direction on compiling a PPAP package using *AIAG PPAP Manual 4<sup>th</sup> edition*, *JLTV Specific Requirements*, and the *AMG PPAP Workbook: Supplier Quality Guidelines*.

The AM General (AMG) PPAP workbook includes all 18 elements in their respective forms, including instructions on accurate and thorough completion of required documentation. RGSBI A&D is honored to partner with AMG to help guide suppliers through PPAP and answer any questions that may arise.

**Unless specifically stated, all requirements of AIAG PPAP Manual 4<sup>th</sup> edition apply**

# PPAP Resources

- AIAG PPAP Manual 4th Edition
- JLTV PPAP Requirements - Attachment 0164
- JLTV Special Characteristics - Attachment 0163
- AM General Supplier Quality Manual
  - AM General Fastener Requirements
  - AM General Weld Requirements
  - AM General Paint/Coating Requirements
  - AM General Armor Material Requirements
  - AM General Radiographic Inspection Requirements
- Additional Commodity-specific JLTV requirements may apply

# AM General Resources

**AM General (AMG)** provides resources to all suppliers to ensure that PPAP packages provided to AMG will be standardized. These resources are provided on AMG's official website:

## [AM General Supplier Resources](#)

Resources are listed under "Quality & Engineering":

- *Supplier Quality Manual*
- *PPAP Workbook: Supplier Quality Guidelines*
- *Coating System Assessment*
- *Supplier Reliability Assurance Requirements*

The screenshot displays the AM General website interface. At the top, there is a navigation bar with a search icon, a menu icon, the text "AM GENERAL", and links for "MISSIONS", "FUTURE", and "CONTACT". The main content area is titled "Quality & Engineering". Below this title, there are three document cards, each with a document icon and a title:

- SUPPLIER DOCUMENTS**  
**SUPPLIER QUALITY MANUAL**
- WORKBOOK**  
**COATING SYSTEM ASSESSMENT**
- AM GENERAL FM 1261-1**  
**PPAP WORKBOOK**  
**SUPPLIER QUALITY GUIDELINES**
- SUPPLIER DOCUMENTS**  
**SUPPLIER RELIABILITY ASSURANCE REQUIREMENTS**

# PPAP Approval Types

Interim PPAP approvals may be granted to authorize a supplier permission to ship for a limited period or in a limited quantity. Interim Approval will only be granted when the organization has both:

1. Clearly defined the non-compliances preventing approval
2. Prepared an action plan agreed upon by AM General

Interim approvals require action plans in place to meet full production PPAP approval and must be agreed to by AMG Supplier Quality. A supplier must submit both a Part Submission Warrant (PSW) and an Interim Recovery Worksheet for materials in need of Interim approval.

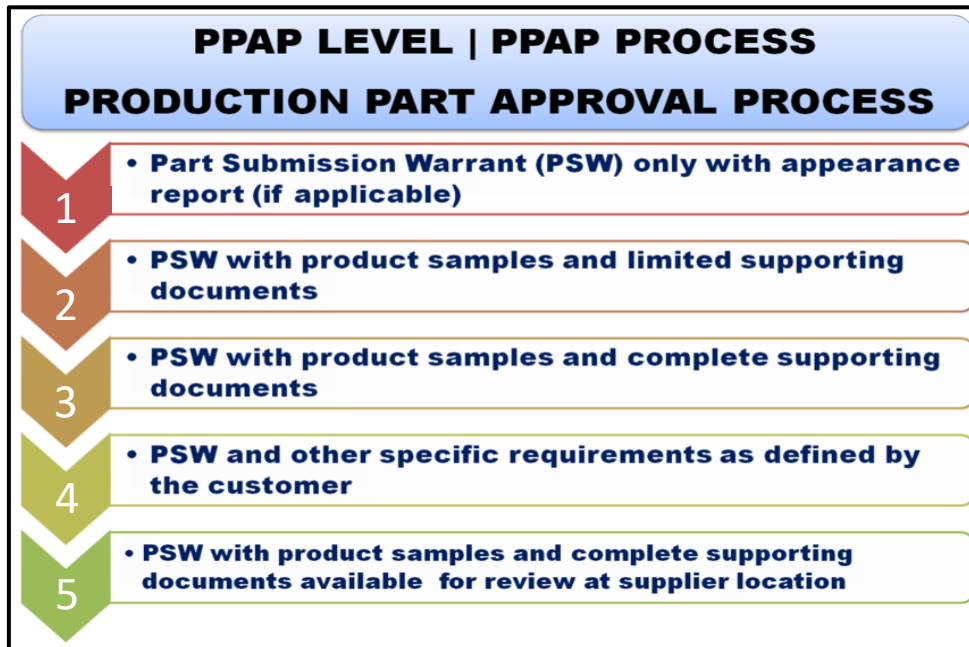

All interim approvals require action plans in place to achieve full PPAP approval within 120 days.

Element	Description	Interim Level 3	Full Level 3
1	Design Record	X	X
2	Authorized Engineering Change Documents	X	X
3	Customer Engineering Approval (if required)	X	X
4	Design Failure Mode and Effects Analysis (Design FMEA)		X
5	Process Flow Diagram(s)		X
6	Process Failure Mode and Effects Analysis (Process FMEA)		X
7	Control Plan		X
8	Measurement Systems Analysis (MSA) Studies		X
9	Dimensional Results	X	X
10	Records of Material / Performance Test Results	X	X
11	Initial Process Studies		X
12	Qualified Laboratory Documentation	X	X
13	Appearance Approval Report (AAR)		X
14	Sample Production Parts	X	X
15	Master Sample (Actual or Picture)	X	X
16	Checking Aids	X	X
17	Customer Specific Requirements, i.e. Component First Article Test (CFAT) Results.		X
18	Part Submission Warrant	X	X

# PPAP Levels and Elements

AM General requires that all suppliers submit a Level 3 PPAP package for JLTV production.

All parts shall achieve Full or Interim (on an exception basis) PPAP Approval to the requirements specified herein. Note, that AM General is **NOT** authorized to waive or modify any PPAP requirement without Government approval for the JLTV Program.

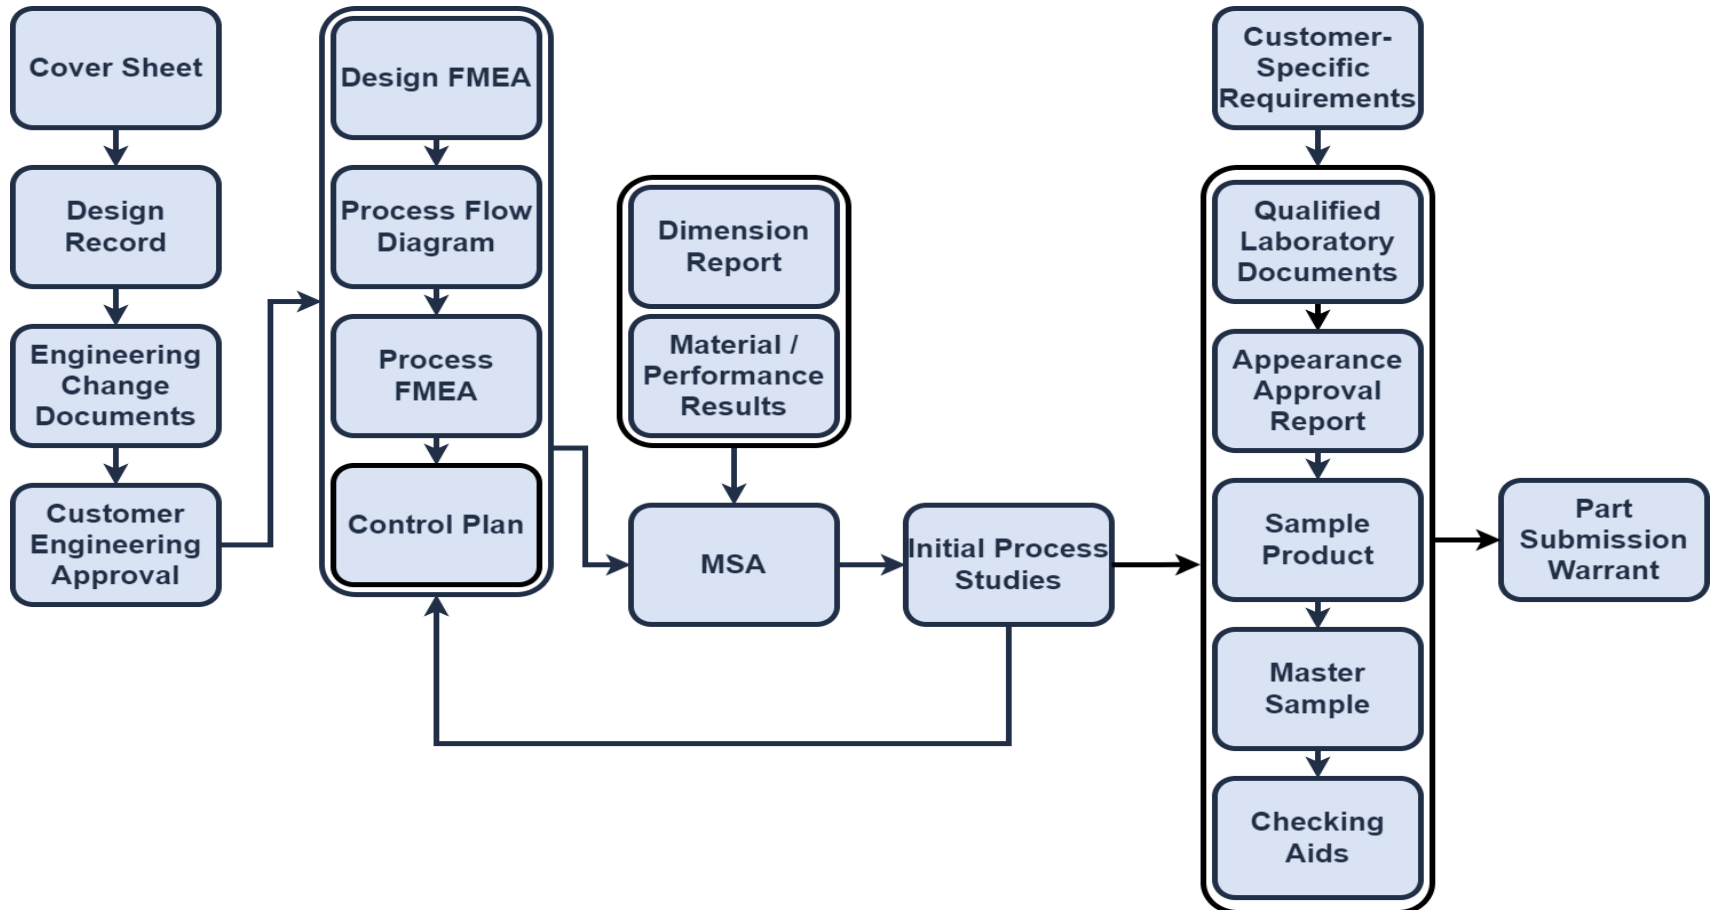

Element	Level 1	Level 2	Level 3	Level 4	Level 5	
1. Design Records	R	S	S	*	R	
- For proprietary components/details	R	R	R	*	R	
- For all other components/details	R	S	S	*	R	
2. Engineering Change Documents	R	S	S	*	R	
3. Customer Engineering Approval	R	R	S	*	R	
4. Design Failure Mode & Effect Analysis	R	R	S	*	R	
5. Process Flow Diagrams	R	R	S	*	R	
6. Process Failure Mode & Effect Analysis	R	R	S	*	R

	S - Submit to the customer.					S
	R - Retain at manufacturing location and make available to the customer if requested.					R
	* - Retain at manufacturing location and submit to the customer if requested.					*

# JLTV PPAP Workflow

The following training material provides instruction for the completion of all level 3 PPAP requirements for the JLTV program, including the definition, purpose, and how to satisfy requirements of each element defined by the *AIAG PPAP Manual 4<sup>th</sup> edition*. A sample PPAP workbook has been provided as a part of this training as guidance for accurate PPAP completion.

# AMG PPAP Workbook

The information sheet must be filled out with accurate information about the manufacturer, authorized personnel, material information, production trial run (PTR) quantity, and customer information. This sheet will be used to auto-fill information throughout the PPAP package.

# PPAP Submission Requirements

The submission requirements sheet contains specific PPAP instructions and submission requirements for JLTV Production, including the conditions of an interim PPAP approval.

<b>AM GENERAL</b> MISSION READY ★ FUTURE DRIVEN		<b>PPAP Submission Requirements</b>		Example			
ALL PPAP SUBMISSIONS must be submitted electronically to eQLM							
Supplier Name	0	Purchase Order No.	0				
Supplier Code	0	Reason for Request					
Part Name	0	Application	0				
Part Number	0	Date Issued					
Revision	0	Submission Due Date					
UNLESS OTHERWISE SPECIFIED IN WRITING BY AM GENERAL SUPPLIER QUALITY REPRESENTATIVE (SQE) :							
Default submission is Level 3							
		Submission Level					
PPAP Submission Requirements and Detail Description		1	2	3	4	5	P
0a) PPAP Coversheet		S	S	S	S	S	S
0b) Part Submission Warrant (PSW)		S	S	S	S	S	S
1) Design Records (Bubble Print all features, notes, and specifications)		R	S	S	S	S	S
2) Engineering or Supplier Change Request (AMG Process Change Notification) - if applicable		R	S	S	S	R	S
3) Customer Engineering Approval - if applicable.		R	R	S	S	R	S
4) Design Failure Modes Effects Analysis (DFMEA) - supplier design responsible		R	R	S	S/R/O	R	S
5) Process Flow Diagram (PFD)		R	R	S	S/R	R	S
6) Process Failure Modes Effects Analysis (PFMEA)		R	R	S	S/R	R	S
7) Process Control Plan		R	R	S	S	R	S
8) Measurement System Analysis (MSA) - Measurement equipment must be supported with MSA.		R	R	S	S	R	R
9) Dimensional Results - 6 Piece full layout required. (Prototype quantities SQE defined)		R	S	S	S	R	S
10) Material/Performance Test Results. PRINT NOTES: Material, Surface Finish, Labeling, Performance, Paint Process, Coating, Welding Documentation IE WPS/PQRs/Welder Certs, Plating, Heat Treat, Fat Report etc. And all Certificates of Conformance Related to Special Processes.		R	S	S	S	R	S
11) Initial Process Studies - Must be provided for all print, specification, AMG SQE deemed critical characteristics, and internal supplier deemed critical characteristics. (Additional process studies may be requested based upon 6 pc. dimensional layout results standard deviation and distribution.)		R	R	S	S	R	S
12) Qualified Laboratory/Documentation. (Internal and or 3rd Party required for all tests conducted.)		R	S	S	S/R	R	R
13) Appearance Approval Report (AAR) - if applicable		R	S	S	S/R/O	R	S
14) PPAP Sample Product- PTR Production Trial Run parts/ upon request prior to production order		S	S	S	S	R	R
15) Master Sample (Submit/Retain Photo Documentation of PPAP layout part(s) Retain Part.		R	R	S	S/R	R	R
16) Checking Aids (Fixture, gage, template, etc) - if applicable		R	R	S	S/R/O	R	R

18a) Part Submission Warrant (PSW)		S	S	S	S/R	R	S
18b) Interim Part Submission Warrant (PSW) - if applicable		R	R	S	S/R	R	R
Bulk Materials Refer to AIAG PPAP 4th ed. Table 4.1 and Appendix F							

Fill out cells not auto-populated. Review submission requirements.

<b>AM GENERAL</b> MISSION READY ★ FUTURE DRIVEN		<b>PPAP Submission Requirements</b>		Example	
Submission Instructions Below					
PPAP Submission Package is to have each Element submitted in AM General or AIAG approved format and in PDF format. For areas that are not applicable, include a sheet for the Element with N/A. Example: For non-design responsible suppliers, the element sub-divider would indicate: "DFMEA N/A" **NOTE-Use ALT+Enter to go to a new line in the box below. Just using the Enter key will exit the box.**					
1: The "Information" tab feeds the rest of the workbook with information automatically so make sure the information is correct and accurate.					
2: All elements of the PPAP document must be submitted as a PDF and each element must be submitted separately and in the correct order. Included in the name of each element are the element number, the element description, the Part Number, and the revision number. Example: (1. Design Record-PPAP #12345678 Rev A) (2. Engineering Change Document-PPAP #12345678 Rev A)					
3: The "PPAP Cover Sheet" Must be submitted as item 0 with the rest of the PPAP workbook.					
4: PPAP element #1 Design Records (Bubble Print all features, notes, and specifications). Be fully sure to account for: a. Every print note and related test requirement must be accounted for and ballooned. b. Every print characteristic must be accounted for and ballooned. c. Every subcomponent part number must be accounted for and ballooned and a separate subcomponent PPAP must be submitted following the level 3 submission requirements. d. Every referenced specification must be accounted for and ballooned. Every clause, note, test requirement, etc. applicable to design record requirements are to also be individually e. The collection of all ballooned numbers shall be sequential and have a resultant value or outcome ("complies" or "acknowledged" etc. are not permissible).					
5: If a process step is on the Process Flow Diagram then it must be on the PFMEA AND the Control Plan. All steps must match in numbering and sequence.					
6: For element "10. Mat Perf Test (FAT Report)", all documents submitted must be submitted in a folder marked "10 Material performance test results-PPAP #12345678 Rev A" and all test results must have the part number, the print revision, and the print note that the test refers to at the top of the first page. The documents must be saved with the following for mat "10A Name of test-PPAP #12345678 Rev A" and additional documented testing must be saved in sequence, for example "10B Name of test-PPAP #12345678 Rev A" "10C Name of test-PPAP #12345678 Rev A"					
7: All Component First Article Test (CFAT) results shall be placed within folder 10.					
8: For elements 14 and 15 the 6 dimensional parts should be used for the 1 master sample and the 5 PTR samples.					
9: For element 17 (Records of compliance) all documents submitted must be submitted in a folder marked "17 records of compliance-PPAP #12345678 Rev A" and all test results must have the part number, the print revision, and the print note that the test refers to at the top of the first page. The documents must be saved with the following for mat "17A Name of record-PPAP #12345678 Rev A" and additional documented testing must be saved in sequence, for example "17B Name of record-PPAP #12345678 Rev A" "17C Name of record-PPAP #12345678 Rev A"					
10: All sub components for an assembly must also have a level 3 PPAP (at minimum) and must be submitted in their own PPAP folder within element 10 Material performance test results folder.					

All documents shall be submitted in AM General or AIAG approved format.

# 0. PPAP Cover Sheet

**Definition:** The PPAP Cover Sheet must be attached with the PPAP package with information for the PPAP part, submission date, and the type of PPAP approval.

**Purpose:** Provide information needed to identify the PPAP and its status

PPAP PART NUMBER:	2584771	1
PPAP PART REVISION LEVEL:	E	2
PPAP PART NAME:	Base, Mounting	3
PPAP SUBMITTAL DATE: YYYY-MM-DD		4
PPAP INTERIM	<input type="checkbox"/>	5
PPAP FINAL	<input type="checkbox"/>	6

1

**PPAP Part Number:** The unique identifier assigned to a part. Auto-filled from Information tab.

2

**PPAP Part Revision Level:** Identifier of design record revision used. Auto-filled from Information tab.

3

**PPAP Part Name:** Nomenclature, descriptive title or label for a part. Auto-filled from Information tab.

4

**PPAP Submittal Date:** Date PPAP package was submitted to the customer. Auto-filled from PSW tab.

5

**PPAP Interim:** Specifies that the PPAP package is in an interim status.

6

**PPAP Final:** Specifies that the PPAP package is in a final status.

# 0. PPAP Cover Sheet

**How to:** Use the box below to list any elements not required for a specific PPAP submission.

<b>Non-Applicable Elements - List below the ELIGIBLE elements that are non-applicable to this PPAP (Ex 4, DFMEA)</b> <b>AM GENERAL/SUB-CONTRACTORS SHALL COMPLY AS APPLICABLE IF ANY NON-APPLICABLE ELEMENT LISTED BECOMES APPLICABLE</b>			
<div style="display: flex; justify-content: center; align-items: center;"> <div style="border: 1px solid black; border-radius: 50%; width: 40px; height: 40px; display: flex; align-items: center; justify-content: center; margin-bottom: 10px;">7</div> <div style="text-align: center; margin-left: 10px;"> <h2 style="color: red; margin: 0;">Example</h2> </div> </div>			
<u>PRINT NAME</u>	<u>SIGNATURE</u>	<u>TITLE</u>	<u>DATE</u>

8

9

10

11

7

**Non-Applicable Elements List:** List of Elements not required for submission.

8

**Print Name:** Printed name of personnel who completed this form.

9

**Signature:** Signature of personnel who completed this form.

10

**Title:** Title of personnel who completed this form.

11

**Date:** Date of when this form is completed by personnel.

# 0. PPAP Cover Sheet

**How to:** Ensure information is auto-filled correctly from the Information and PSW tabs. Select PPAP interim or PPAP final depending on the type of approval granted in coordination with AMG Supplier Quality. List all elements that are not required for a specific PPAP Submission.

## Production Part Approval Process (PPAP)

---

PPAP PART NUMBER: 2584771  
 PPAP PART REVISION LEVEL: E  
 PPAP PART NAME: Base, Mounting

Printed Copy Uncontrolled  
 Latest Edition on AMG Intranet Site (<http://ride.amgeneralintranet.com>)
Rev 2/30/2024

Element 0 Cover Sheet	
JLTV Requirements	Inadmissible
Attach this file as element 0 to be the first element seen by reviewers.	Supplier cannot submit a PPAP package without its cover sheet.

# 1. Design Record

**Definition:** Records of the engineering specifications and requirements, including all physical and digital information, that fully define the product (component, sub-assembly, or assembly).

**Purpose:** To fully define the part and to be used as a reference throughout the PPAP package.

# 1. Design Record

**How to:** Design records are required for every component in the PPAP.

For Bubbled Drawings:

- Add bubbles from the top left to the bottom left in a clockwise direction.
- Ensure to bubble drawing notes first and follow all requirements for bubbling x2 or more callouts.
  - All callouts of x2 or more must have their own bubble, e.g., 7.1 and 7.2.
- Attach final bubbled drawings and any standards or specifications, along with uploading any 3D models as required.

NOTES:

1. INTERPRET DRAWING IN ACCORDANCE WITH ASME Y14.100-2017, DIMENSIONS AND TOLERANCES IN ACCORDANCE WITH ASME Y14.5-2018.
2. MATERIAL: STEEL, ALLOY 4130, COND F, SPEC SAE AMS-S-4798  
OPTIONAL MATERIAL:  
STEEL, ALLOY 4130, COND OPT, SPEC ASTM-A304  
QUENCH AND TEMPER Rc 28/32 OR STEEL,  
ALLOY 4130, COND A OR N, SPEC MIL-S-18729,  
QUENCH AND TEMPER Rc 28/32.
3. REMOVE SHARP EDGES.
4. ELECTROLESS NICKLE PLATING PER ASTM B723-04 TYPE V CLASS 3.
5. ITEM IDENTIFICATION  
APPLY PER MIL-STD-130  
80004 - 004889255  
MFR. (MFR CAGE CODE)

REVISION HISTORY			
REV	DESCRIPTION	DATE	APPROVED
E	COMPLETE REDRAW, REPLACED DOD-STD-100 WITH ASME Y14-100, ADDED ASME 14.5.	7/3/2023	

Example

DMEC #	UNLESS OTHERWISE SPECIFIED DIMENSIONS ARE IN INCHES	CONTRACT NUMBER	CONTRACTOR	DESIGN ACTIVITY

2549003	LVTR7CZ/EL	INSV		
NEXT ASSY	LVTR7CZ/EL	MODEL APPROVAL		
APPLICATION	MATERIAL ENGINEER	DESIGN APPROVAL		
	LIB.	BY RAY		

Element 1 Design Record	
JLTV Requirements	Inadmissible
Fully released production drawings without water marks.	Advanced released or preliminary documents, or no documents.
For Supplier owned drawings, include both the division "note form" or "word" drawing at minimum.	Misalignment of revision no. with PO and drawing requirements.
A copy of the signed/stamped title block on the supplier drawing. Assembly and detail level drawing also included.	Experimental/Development PO (even if listed as a "placeholder" for production), Advanced Procurement PO, no evidence of demand forecast or forecast does not match expected volume.
Appropriate revisions across all drawing levels & corresponding to purchase order (PO) revision call-out	

# 2. Engineering Change Documents

**Definition:** The Engineering Change Document outlines any changes to the design not included in the design record that is implemented on the product, part, or tooling.

**Purpose:** Provide a record of changes that aren't included in the design record but are needed to address an issue in the design or tooling.

ECR

ECO

ECN

The image displays three overlapping forms used for engineering change management:

- Engineering Change Request (ECR):** The leftmost form, titled 'rgbsi Engineer Change Request'. It includes fields for 'Contractor Name', 'Change Requested By', and 'Description of requested Change'. It also contains a section for 'COMPLETED BY CONTRACTOR' with instructions on cost estimation and a signature block for the originator and manager.
- Engineering Change Order (ECO):** The middle form, titled 'rgbsi ENGINEERING CHANGE ORDER'. It features a 'FOLLOW TRACK' section with 'YES' and 'NO' options, and a table for tracking change implementation across various departments like Design, Tooling, and Production.
- Engineering Change Notice (ECN):** The rightmost form, titled 'rgbsi Engineering Change Notice'. It includes a 'Reason for Change' section with checkboxes for Production, Deviation, BOM, Design, Process, Document, Cost Savings, and Vendor. It also has a 'Description' field and a 'Documents Affected' section.

A large blue arrow points from the ECR form towards the ECN form, indicating the flow of the change process.

# 2. Engineering Change Documents

**How to:** The organization shall provide any authorized engineering change documents for those changes not yet recorded in the design record but incorporated in the product, part, or tooling.

If there are no change documents, suppliers must record on the Cover Page that Element 2 is Non-Applicable.

Element 3 Engineering Approval	
JLTV Requirements	Inadmissible
Only fully - released and approved drawings shall be utilized for PPAP unless a Government approved RFD is in place.	Released and approved drawings missing or incomplete.

# 4. Design Failure Mode & Effects Analysis

## For Design Responsible Suppliers Only

**Definition:** Design Failure Mode and Effects Analysis (DFMEA) looks at the probability of part failure from design and its effect on the intended function of the product. The DFMEA is a living document.

**Purpose:** A necessary tool used to identify and prioritize risk areas in the design and their mitigation plans prior to volume production. The information in the DFMEA will flow to following elements such as the Process Flow Diagram, PFMEA, and the Control Plan.

# 4. Design Failure Mode & Effects Analysis

## For Design Responsible Suppliers Only

**How to:** The top portion of the DFMEA form provides details for part and supplier information.

Application:		1
Part Number:		2
Part Name:		3
Team:		4

Design Responsibility:		5
Key Date:		6
Location:		7

DFMEA Number:		8
Prepared by:		9
Date (Orig.)		10
Date (Rev.)		11

1	<b>Application:</b> Specific use or purpose of a process, system, or equipment.
2	<b>Part Number:</b> Unique identifier and revision letter assigned to a part.
3	<b>Part Name (Nomenclature):</b> Descriptive title or label for a part.
4	<b>Team:</b> Members involved with initiating, processing, and completing the DFMEA.

5	<b>Design Responsibility:</b> Authoritative design group for part or system.
6	<b>Key Date:</b> DFMEA Study Deadline / Milestone Date.
7	<b>Location:</b> Geographic site where the part is manufactured.
8	<b>DFMEA Number:</b> Unique identifier for DFMEA Study.

9	<b>Prepared By:</b> Individual or team who conducted and documented the DFMEA.
10	<b>Date (Orig.):</b> Initial Completion DFMEA Completion Date.
11	<b>Date (Rev.):</b> Date of most recent revision to DFMEA Document.

# 4. Design Failure Mode & Effects Analysis

## For Design Responsible Suppliers Only

**How to:** The bottom portion of the DFMEA form contains the JLTV DFMEA template. The DFMEA Ratings tab is a reference provided to help suppliers determine the severity, occurrence, and detection rating values.

														Action Results				
Item/Function	Requirements	Potential Failure Mode	Potential Effect(s) Of Failure	Severity	Characteristics	Potential Causes/Mechanisms Of Failure	Current Design Controls Prevention	Occurrence	Current Design Controls Detection	Detection	RPN	Recommended Action	Responsibility & Target Completion Date	Action Taken	Severity	Occurrence	Detection	RPN
12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30

$$\text{Severity} \times \text{Occurrence} \times \text{Detection} = \text{RPN}$$

12	<b>Item/Function:</b> The design item or function being addressed.
13	<b>Requirements:</b> The specifications or requirements for the design item.
14	<b>Potential Failure Mode:</b> The way a part or process could potentially fail.
15	<b>Potential Effect(s) Of Failure:</b> Potential failure mode consequences.
16	<b>Severity:</b> (Original) Impact of the potential failure mode consequences.
17	<b>Characteristics:</b> Key Performance Characteristic Classification Type.

18	<b>Potential Causes/Mechanisms Of Failure:</b> Potential reasons that lead to a failure.
19	<b>Current Design Controls Prevention:</b> Controls in place to prevent design failures.
20	<b>Occurrence:</b> (Original) Likelihood or probability that a failure mode might happen.
21	<b>Current Design Controls Detection:</b> Controls in place to detect design failures.
22	<b>Detection:</b> (Original) Likelihood that the current controls will find a failure.
23	<b>RPN:</b> (Original) Risk Priority Number, a numerical value used to quantify risk.

24	<b>Recommended Action:</b> Steps proposed to reduce or eliminate the risk of failure.
25	<b>Responsibility &amp; Target Completion Date:</b> Actions Taken Deadline / Milestone.
26	<b>Action Taken:</b> Steps that have been implemented to address a potential failure.
27	<b>Severity:</b> (Updated) Impact of the potential failure mode consequences.
28	<b>Occurrence:</b> (Updated) Likelihood or probability that a failure mode might happen.
29	<b>Detection:</b> (Updated) Likelihood that the current controls will find a failure.
30	<b>RPN:</b> (Updated) Risk Priority Number, a numerical value used to quantify risk.

# 4. Design Failure Mode & Effects Analysis

## For Design Responsible Suppliers Only

**How to:** A completed DFMEA form will include all failure modes, severity, occurrence, detection, and RPN data populated according to AIAG/JLTV design requirements. This includes any mitigated RPN value under Action Results being lower than the RPN of the initial design.

Application:		Bracket on Ship		Design Responsibility:		Bureau of Ships		FMEA Number:		128858								
Part Number:		2584771 Rev. E		Key Date:		7/8/2023		Prepared by:		Jane Doe

Element 4 Design Failure Modes Effects Analysis (DFMEA)	
JLTV Requirements	Inadmissible
DFMEA is required at the component level for all parts where the manufacturer is design responsible. This includes product built by the Contractor at the Contractor's facilities.	No DFMEA produced by a producer with design authority.
DFMEA shows risk analysis that addresses design and prior failures from similar	Areas of high risk not addressed with adequate process controls.
Documented evidence of a Design FMEA.	No evidence customer data, prior failures & escapes from a similar design used in
Evidence that document is dynamic and updated based on learning.	Insufficient scope that does not address customer requirements and all potential
Evidence that customer requirements are understood and addressed.	No evidence that critical items, features, severity indexes etc. are transferred to the
Evidence that lessons learned, quality history, standard work etc. are incorporated	
All high RPN, high Severity items are addressed with an adequate action plan or	
Identification of key characteristics.	
Critical characteristics shall be identified, recorded, and implemented with a Severity Rank of 9 or 10.	Critical characteristics that fail to demonstrate a minimum CpK of 1.67, demonstrate a robust Government-approved error proofing system that ensures product conformance, or be subject to 100% inspection.
Significant characteristics shall be identified, recorded, and implemented with a Severity Rank of 5, 6, 7, 8 with a corresponding Occurrence Rank of 4, 5, 6, 7, 8, 9, or 10.	Significant characteristics that fail to demonstrate a minimum CpK of 1.33, demonstrate a robust Government-approved error proofing system that ensures product conformance, or be subject to 100% inspection.

# JLTV PPAP Workflow

## Next PPAP Element: 5. Process Flow Diagram

# 5. Process Flow Diagram

**Definition:** Graphical outline of all steps and sequences of the manufacturing process for a part, from start to finish that meets the customer needs, requirements, and expectations.

**Purpose:** The Process Flow Diagram is the foundation on which the PFMEA and Process Control Plan are built, providing key insights for evaluating and controlling the process.

Legend:					
	○ Operation	⇨ Transportation	□ Inspection	Ⓓ Delay	▽ Storage
Step	Operation or Event ○ ⇨ □ Ⓓ ▽	Description of Operation or Event	Evaluation and Analysis Methods		
10	⇨	Transporting Material to Plant	Material received in warehouse		
20	⇨ □	Inspect Material Once Arrived	Visual inspection of material to check for damage		
30	⇨ ▽	Store Material Until Use	Material stored in racks inside warehouse		
40	⇨	Bring Material to Line	Material moved on rack to designated line		
50	○	Cut Outer Shape from Steel	Outer shape cut from material using sharp machine		
60	○	Drill Holes	Hole features produced by using a custom $\phi.545$ drill		
70	○	Remove Sharp Edges	Sharp edges removed through trimming		
80	○ <b>SC</b>	Add Nickel Plating	Add the Electroless Nickel Plating		
90	○	Add Item Identification	Item Identification stamped through press		
100	⇨ □	Final Inspection of Part	Final part inspected to match print		
110	○	Package Part	Part packaged through current packaging instructions		
120	⇨ ▽	Store Final Product	Final product stacked in warehouse in final packaging		
130	⇨	Ship to Customer	Item shipped to customer out of warehouse		

# 5. Process Flow Diagram

**How to:** The supplier must completely and accurately define each step of the production process, from receiving incoming materials to shipping finished product, including external processes.

Application	1	Issue Date	4
Supplier Name	2	Part Name	5
Supplier Code	3	Part Number	6

**Legend:**

Operation    
  Transportation

20		Inspect Material Once Arrived	Visual inspection of material to check for damage
30		Store Material Until Use	Material stored in racks inside warehouse
40		Bring Material to Line	Material moved on rack to designated line
50		Cut Outer Shape from Steel	Outer shape cut from material using sharp machine

**1 Application:** Specific use or purpose of a process, system, or equipment.

**2 Supplier Name:** Name of the company or entity providing materials or services.

**3 Supplier Code:** Known as CAGE (Commercial and Government Entity) Code.

**4 Issue Date:** Official release date of the Process Flow Diagram.

**5 Part Name (Nomenclature):** Descriptive title or label for a part.

**6 Part Number:** Unique identifier and revision letter assigned to a part.

**7 Step:** Operational sequence number denoting the operation steps.

**8 Operation or Event:** Defined operation type. (See Legend)

**9 Description of Operation or Event:** Manufacturing operation name.

**10 Evaluation and Analysis Methods:** Process methods of operation or inspection.

# 5. Process Flow Diagram

**How to:** The Process Flow Diagram is a living document subject to on-going revisions. Subsequent process changes must be documented in the Process Flow Diagram and alternate process paths/formal rework loops should be documented as part of the main flow diagram. Ensure to use symbology to identify all Key Characteristics in the Process Flow Diagram.

Ensure information is auto filled correctly and fill out Issue Date. Complete process flow diagram to match current process.

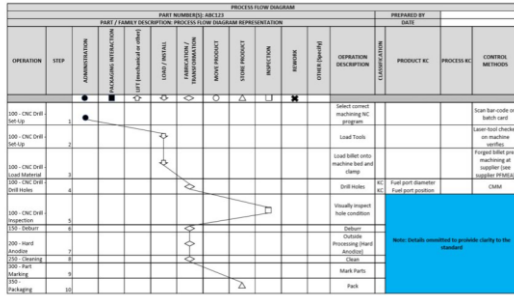

Legend:			
○	Operation	⇨	Transportation
□	Inspection	⊖	Delay
Step	Operation or Event ○ ⇨ □ ⊖ ▽	Description of Operation or Event	Evaluation and Analysis Methods <i>Example</i>
10	⇨	Transporting Material to Plant	Material received in warehouse

Op. 80 identified as Significant Characteristic

# 5. Process Flow Diagram

## PFD Example- Acceptable

- Clearly defined steps
- Easy to follow step by step
- Proper usage of process symbols
- Allows for quick review of steps that add value and steps that do not add value

## PFD Example- Unacceptable

- Illegible
- Confusing flow
- Non-standard format

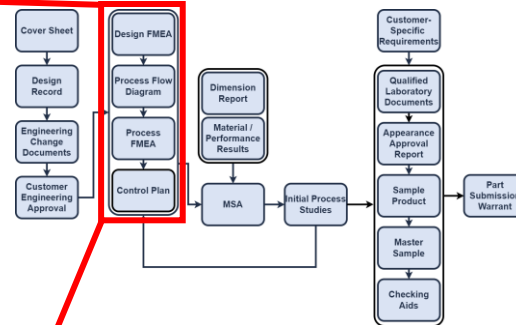

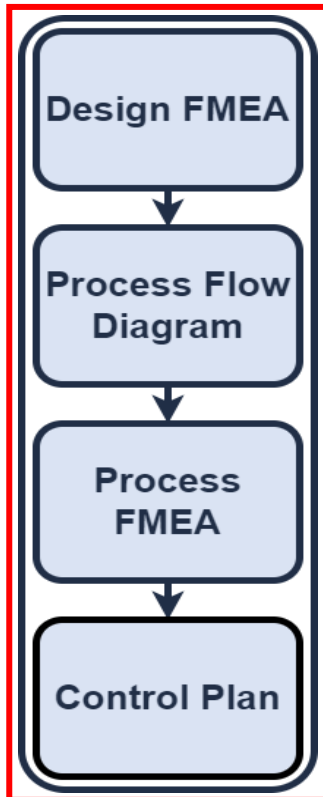

### Element 5 Process Flow Diagram (PFD)

JLTV Requirements	Inadmissible
Process map represents actual process used and is visibly a living document (contains active revision identification for process changes).	No process map exists.
Standard flow chart format should used or equivalent information clearly identified - multiple formats are acceptable.	A process flow exists that contains insufficient information in describing the process flow.
Key performance indicators (KPIs) and key performance objectives (KPOs) are identified.	Route Sheets/Travelers do not contain adequate information.
Identify where critical to quality (CTQ) features are produced.	Traveler or operation sheet does not clearly show all sources of variation.
Identify if flow map represents a part family.	Alternate flow paths are not documented.
Route Sheets/Travelers are acceptable if they contain adequate information.	CTQ features are not documented.
Alternate flow paths, rework, outside operations, storage, inspection etc. are shown.	

# 6. Process Failure Mode & Effects Analysis

**Definition:** Process Failure Mode & Effects Analysis (PFMEA) is a disciplined review and analysis of a new or revised process and is conducted to anticipate, resolve, or monitor potential process problems for a new or revised product program. The PFMEA is a living document.

**Purpose:** The PFMEA is a tool used to identify and prioritize risk areas and their mitigation plans prior to volume production. The information in the PFMEA will flow to following elements such as the Process Flow Diagram and the Control Plan.

AM GENERAL MISSION READY • FUTURE DRIVEN

Op. 80 identified as Significant Characteristic

**Example**

# 6. Process Failure Mode & Effect Analysis

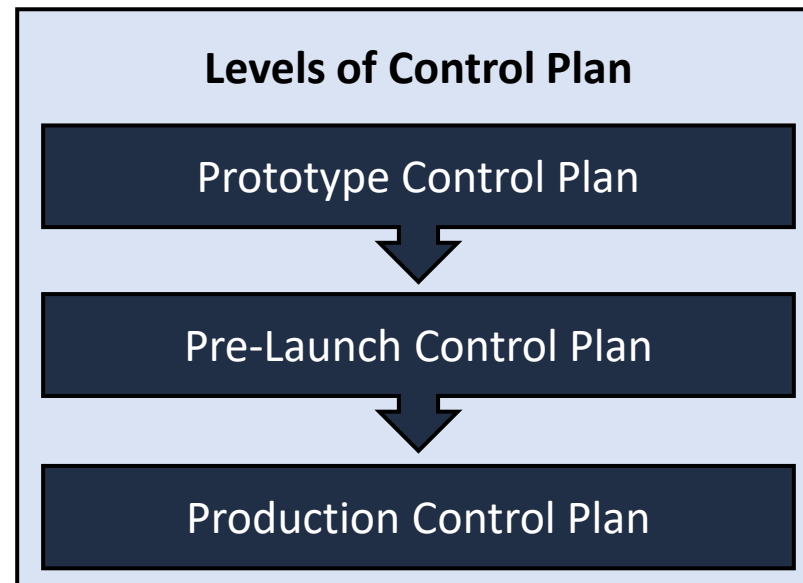

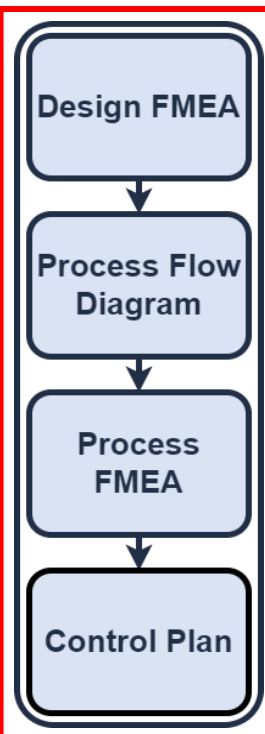

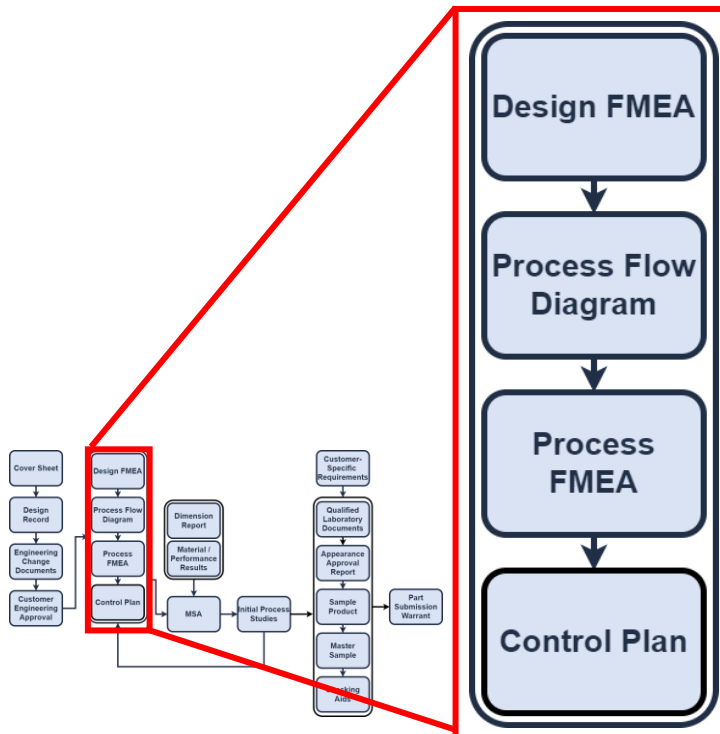

- <CC> Critical Characteristic  
Must be addressed on Control Plan with 100% inspection or 1.67 Cpk
- <SC> Significant Characteristic  
Must be addressed on Control Plan with 100% inspection or 1.33 Cpk
- Continuous Improvement Zone  
Address top 20% Failure Modes / Causes (Pareto'd by RPN)
- Low Risk Zone  
Address as needed

Element 6 Process Modes Effects Analysis (PFMEA)	
JLTV Requirements	Inadmissible
Documented evidence of a PFMEA that meets the standard.	No PFMEA produced by a producer.
PFMEA illustrates linkage to Process Flow Map and DFMEA.	Areas of high risk not addressed with adequate process controls.
PFMEA shows risk analysis that addresses process risks and prior internal defects and/or Customer escapes taken into account from similar designs.	Lack of linkage to DFMEA.
Customer CTQ Features (e.g., KPC1, KPC2, etc.) identified on PFMEA.	No evidence customer data, prior failures & escapes from a similar design used in analysis.
Producer self-selected key characteristics identified on PFMEA where appropriate.	No identification of Customer and/or self-selected key characteristics where appropriate.
Critical characteristics shall be identified, recorded, and implemented with a Severity Rank of 9 or 10.	Critical characteristics that fail to demonstrate a minimum CpK of 1.67, demonstrate a robust Government-approved error proofing system that ensures product conformance, or be subject to 100% inspection.
Significant characteristics shall be identified, recorded, and implemented with a Severity Rank of 5, 6, 7, 8 with a corresponding Occurrence Rank of 4, 5, 6, 7, 8, 9, or 10.	Significant characteristics that fail to demonstrate a minimum CpK of 1.33, demonstrate a robust Government-approved error proofing system that ensures product conformance, or be subject to 100% inspection.

# 7. Control Plan

**Definition:** The Control Plan is a written description of the systems for controlling production parts and processes. The production control plan is a living document and should be updated to reflect the addition/deletion of controls based on corrective actions and experience gained by producing parts (AM General approval may be required for alterations to Control Plan).

**Purpose:** Describe steps to key inspection and control activities with intent to control the design features and the process variables to ensure product quality. The Control Plan is a **living document** that is revised and updated throughout the life of the product.

# 7. Control Plan

**How to:** The Process Control Plan must include each process step identified on the Process Flow Diagram and Process FMEA.

- Includes the controls identified in the Process FMEA
- Addresses product and process characteristics at each process step
- Describes and identifies all Special Characteristics

## CONTROL PLAN

**Customer Engineering Approval / Date:** Engineering authorization date.

**14**

**Customer Quality Approval / Date:** Quality Management authorization date.

**15**

**Other Approval / Date:** Additional validation or authorization date.

# 7. Control Plan

**How to:** The columns contain the information that is needed when filling out the plan. The plan outlines the process, the characteristics involved, the methods to control the process, and the plan if the controls fail.

PART/ PROCESS NUMBER	PROCESS NAME/ OPERATION DESCRIPTION	MACHINE, DEVICE JIG, TOOLS FOR MFG.	CHARACTERISTICS			SPECIAL CHAR. CLASS	METHODS					REACTION PLAN
			NO.	PRODUCT	PROCESS		PRODUCT / PROCESS SPECIFICATION / TOLERANCE	EVALUATION / MEASUREMENT TECHNIQUE	SAMPLE		CONTROL METHOD	
									SIZE	FREQ.		
16	17	18	19	20	21	22	23	24	25	26	27	28

<b>16</b>	<b>Part / Process Number:</b> The operational sequence number denoting the operation steps.
<b>17</b>	<b>Process Name / Operation Description:</b> Manufacturing operation name.
<b>18</b>	<b>Machine Device, Jig, Tools for MFG:</b> Unique identifier for MFG equipment and tooling.
<b>19</b>	<b>No.:</b> Number of machine, device jig, or tool.
<b>20</b>	<b>Product:</b> Define final product when the process is complete. (See PFMEA)

<b>21</b>	<b>Process:</b> Manufacturing Process Key Performance Characteristics. (See PFMEA)
<b>22</b>	<b>Special Char. Class:</b> Key Performance Characteristic Classification Type.
<b>23</b>	<b>Product / Process Spec / Tolerance:</b> MFG Process Allowable Tolerance Limits.
<b>24</b>	<b>Evaluation / Measurement Technique:</b> MFG operation measurement method.
<b>25</b>	<b>Size:</b> Quantity of parts inside the sample size.

<b>26</b>	<b>Freq.:</b> Sampling rate frequency. Time between samples.
<b>27</b>	<b>Control Method:</b> Strategy or technique employed to monitor the system.
<b>28</b>	<b>Reaction Plan:</b> Predefined set of steps to follow in response to a deviation.

# 7. Control Plan

Element 7 Process Control Plan	
JLTV Requirements	Inadmissible
Documented evidence Process Control Plan meets AIAG 2.2.7.	No documented evidence of a Process Control Plan or the one presented does not meet AIAG 2.2.7.
Listed finished dimensions and tolerances match the drawing.	High risk items identified on the PFMEA are not adequately addressed.
Control Plan includes controls for all UTC Member defined KCs and any producer identified KCs from PFMEA.	No reaction plan exists.
Control Plan includes controls for any high severity and high RPN failure modes identified on the PFMEA (e.g. early warning, control, system redundancies and mistake-proof methods).	No inspection frequencies.
Key Process Inputs, Settings, Control Methods, and SPC chart type are defined for each critical operation.	
Control Plan accounts for outside/sub-tier processes, where appropriate [i.e., sub-tier performs process that generates a KPC].	
Reaction plans exist for nonconforming condition/out of control situations (e.g. containment, customer notification, recovery, communication, stop the process and inform supervision).	

# JLTV PPAP Workflow

## Next PPAP Element: 8. Measurement System Analysis

# 8. Measurement System Analysis

**Definition:** Measurement System Analysis (MSA) is the statistical method used to show the variation in the measurement system, which includes Gage R&R, Linearity, Stability, Bias, etc.

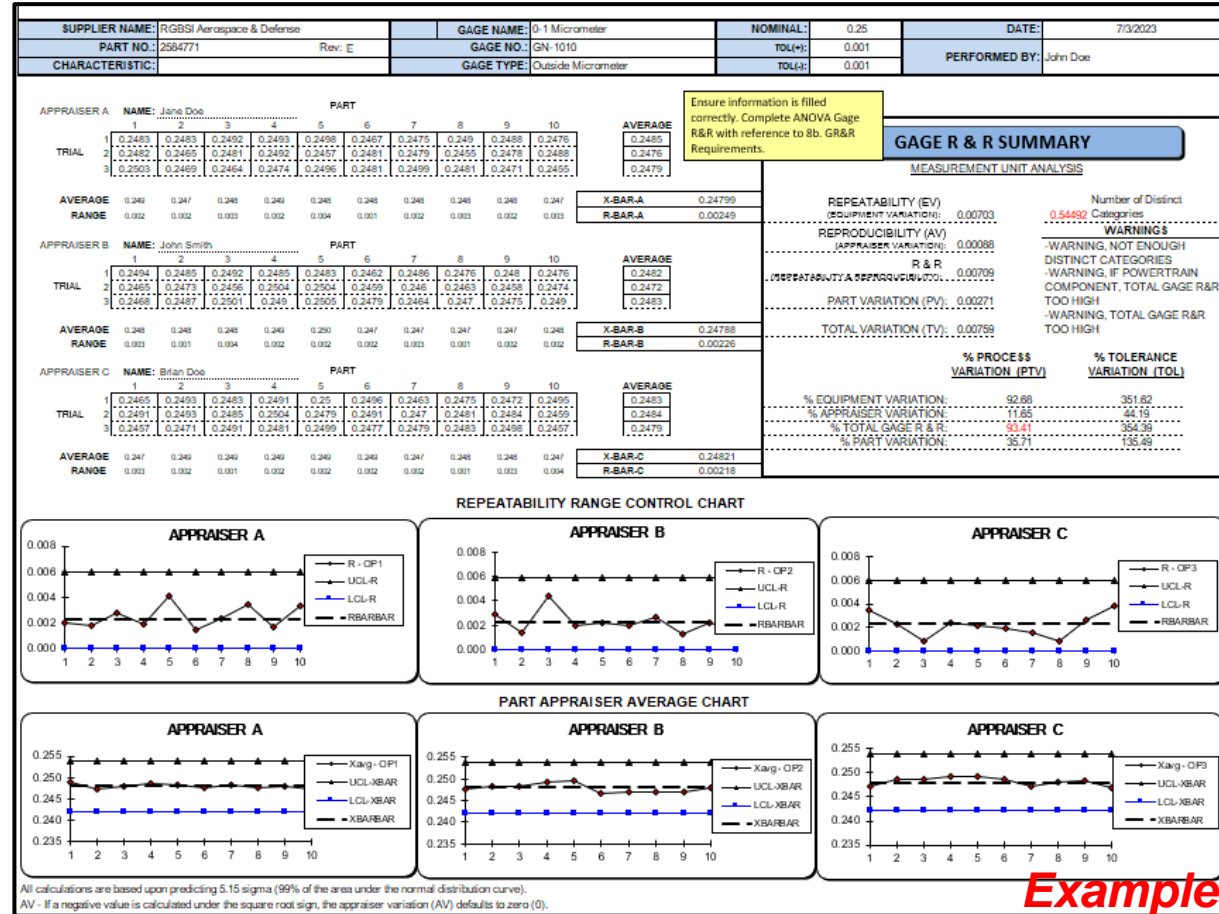

**Purpose:** The Measurement System Analysis connects to measurement data used in nearly every manufacturing process.

# 8a. Measurement System Analysis

**How to:** The supplier must populate all information in the PPAP workbook for:

- Supplier Info
- Part Info
- Characteristic Info
- Gage Info
- Dimension / TOL Info
- Appraiser Info
- ANOVA (Analysis of Variance)
- Gage R&R

Example

# 8a. Measurement System Analysis

| 5 | <b>Gage Number:</b> Unique identifier assigned to a specific measuring device.               | 10 | <b>Date:</b> Date of the measurement system analysis study.           | 15 | <b>RBARA:</b> Average of all the subgroup ranges in the study.                 |

# 8c. Measurement System Analysis

## How to: ANOVA Gage R&R

- 16** **Repeatability Range Control Chart:** Tracks time variation from measurements.
- 17** **Part Appraiser Average Chart:** Average measurement per appraiser per part.
- 18** **Equipment Variation (EV):** Variability due to the measurement instrument.
- 19** **Appraiser Variation (AV):** Variability due to the individual performing the test.

- 20** **Gage R&R (GRR):** Combined estimate of repeatability & reproducibility.
- 21** **Part Variation (PV):** Variation detected in the parts measured in the study.
- 22** **Total Variation (TV):** Overall variability from all sources of variation.
- 23** **No. Of Distinct Categories:** measurement of variation in sample parts

- 24** **% Process Variation (PTV):** Variation as a percentage of total process output.
- 25** **% Tolerance Variation (TOL):** Variation as a percentage of total tolerance.

**25**

**Part Number:** Unique identifier assigned to a specific part or component.

**26**

**Part Name (Nomenclature):** Descriptive title or label for a part.

**27**

**Characteristic:** A distinct attribute or property of a part or process.

**28**

**Gage Name:** Specific name or model of the measurement device used.

**29**

**Gage Number:** Unique identifier assigned to a specific measuring device.

**30**

**Pass Condition:** Acceptable result for characteristic; this is the Upper Limit.

**31**

**Date Performed:** Date when Attribute Agreement Analysis performed.

**32**

**Gage Type:** The category or classification of the measuring device.

**33**

**Fail Condition:** Rejectable result for characteristic; this is the Lower Limit.

**34**

**Appraiser:** Personnel performing analysis.

**35**

**Part Data:** Pass/fail results captured in the analysis. "0" is Fail, "1" is Pass.

**36**

**Reference:** Actual pass/fail result of the part being measured.

**37**

**Reference Value:** Actual value of the part being measured.

**38**

**Code:** Pass / Fail Results. "+" for a pass, "x" for a fail.

# 8. Measurement System Analysis

## How to: Meet all AM General MSA Requirements

### Variable Analysis

Anova Method is only acceptable method.

- Select a minimum of 10 parts.
- Select a minimum of 3 operators.

### Results

- Number of distinct categories shall be 5 or greater.
- For Powertrain and like type components Total Gage R&R shall be less than 10%.
- For all other components Total Gage R&R shall be less than 20%.
- Please consult your SQE for any variable results over these limits.

### Attribute Agreement Analysis

Attribute Risk Method is only acceptable method.

- Select a minimum of 3 operators, perform 3 trials.
- Select a minimum of 50 parts.
- Validate selected parts with variable gage such as CMM.
- 10% below and above boundary limits.
- 25% at and around upper and lower boundary limit.
- 30% between boundary limits to represent range of normal process variation.

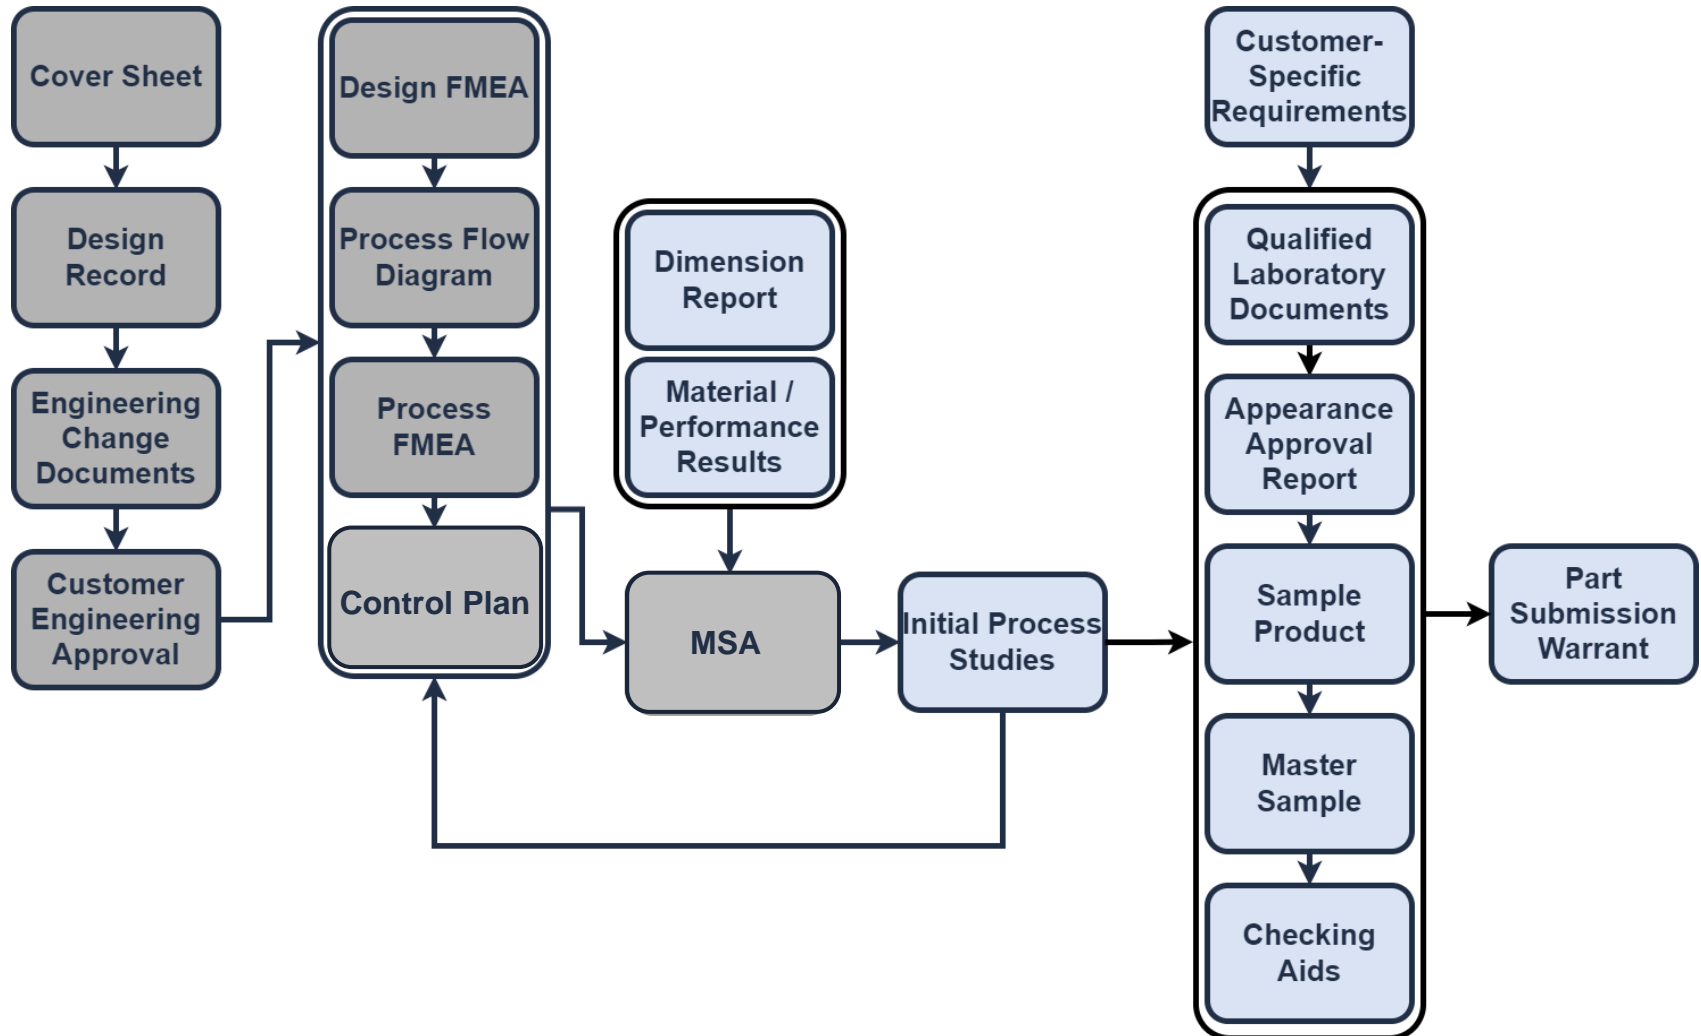

### Results

- Kappa coefficient between operators must exceed 0.70, greater than 0.80 preferred.
- Kappa coefficient operator to standard must exceed 0.70, greater than 0.80 preferred.

Element 8 Gage Repeatability & Reproducibility (GR&R)	
JLTV Requirements	Inadmissible
Demonstrated Gage Capability Studies completed for all measurement devices.	Gages used have inadequate measurement resolution.
Gage resolution specified meeting 10:1 ground rule.	Only gage calibration system.
Producer action plan(s) in place to address unacceptable gage capability results.	No or inadequate action plan for gage capability results that do not meet requirements.

# JLTV PPAP Workflow

## Next PPAP Element: 9. Dimensional Report

# 9. Dimensional Results

**Definition:** Dimensional results show that the physical part measurements meet the drawing requirements.

**Purpose:** Ensure that the production process can produce parts according to print requirements. If there are issues with meeting the drawing requirements, changes must be made to the Process Flow, PFMEA, or the Control Plan to fix the cause of the issue.

**NOTES:**

- INTERPRET DRAWING IN ACCORDANCE WITH ASME Y14.100-2017. DIMENSIONS AND TOLERANCES IN ACCORDANCE WITH ASME Y14.5-2018.
- MATERIAL: STEEL, ALLOY 4130, COND. F, SPEC. SAE AMS-2-6758. OPTIONAL MATERIAL: STEEL, ALLOY 4130, COND. OPT, SPEC. ASTM-A304. QUENCH AND TEMPER RC 28/33 OR STEEL, ALLOY 4130, COND. A OR N, SPEC. MIL-S-35729, QUENCH AND TEMPER RC 28/33.
- REMOVE SHARP EDGES.
- ELECTROLESS NICKLE PLATING PER ASTM B733-04 TYPE V CLASS 3.
- ITEM IDENTIFICATION APPLY PER MIL-STD-130 80064 - 004899355 MFR - (MFR CAGE CODE)

Rev 8/25/2023

# 9. Dimensional Results

**How to:** For the top portion of the Dimensional Results form, information needs to be filled out to provide details on the supplier, the part it is being completed on, and the inspection facility involved.

SUPPLIER NAME:	1	PART NUMBER:	3
SUPPLIER CODE:	2	PART NAME:	4
NAME OF INSPECTION FACILITY:		5	REVISION
DATE:	6		7

**1**

**Supplier Name:** Name of supplier that produced sample part.

**2**

**Supplier Code:** Unique code (typically a Cage Code) identifying the supplier.

**3**

**Part Number:** Unique number assigned to identify the sample part.

**4**

**Part Name:** Name given to a part or product.

**5**

**Name of Inspection Facility:** Facility that performed inspection to sample parts.

**6**

**Date:** Date of when inspection on sample parts was performed.

**7**

**Revision:** identifier of design record revision used to produce sample parts.

# 9. Dimensional Results

**How to:** For the bottom portion of the Dimensional Results form, information needs to be filled out for all 6 parts. The dimension information needs to be entered in from the bubbled drawing with accurate information. The results must be entered as taken, with failing measurements resulting in the cell turning red. This shows a failure in the measurement to meet the requirement dimension and tolerance, which causes in a failure of the inspection of the part.

Supplier required to provide marked up drawing to identify items inspected.

ITEM	DIMENSION / SPECIFICATION	TOLERANCE		SPECIFICATION / LIMITS		GAGE TYPE*	QTY. TESTED	MEASUREMENT RESULTS (DATA)						OK	NOT OK
		-	+	MIN	MAX			Piece 1	Piece 2	Piece 3	Piece 4	Piece 5	Piece 6		
ex	4	1.000	1.000	3	5	Caliper	6	4.000	4.000	4.000	4.000	4.000	2.000	-	X

**8**

**Item:** Identified note or dimension from drawing to be measured on sample part.

**9**

**Dim / Spec:** Specified measurable extent of feature as specified on the drawing.

**10**

**Tolerance -:** Low tolerance of dimension as specified in the drawing.

**11**

**Tolerance +:** High tolerance of dimension as specified in the drawing.

**12**

**Spec / Limits Min:** Low limit (or minimum) of dimension as specified in the drawing.

**13**

**Spec / Limits Max:** High limit (or maximum) of dimension as specified in the drawing.

**14**

**Gage Type:** Type of gage used to measure dimension.

**15**

**QTY Tested:** Quantity of parts with dimension inspected.

**16**

**Data:** Dimensional data of measured results for each individual part.

**17**

**OK:** Checkbox specifying dimension measured on parts are acceptable to drawing.

**18**

**Not OK:** Checkbox specifying dimension measured on parts are not acceptable to drawing

# 9a. Dimensional Results

**How to:** A completed Dimensional Results form will have all the items filled out for all the necessary dimensions in the bubbled drawing. It will also determine if the part passes or fails the inspection.

Ensure information is filled correctly. Weld symbol and weld description will come from the bubbled print.  
 PQR#: Procedure Specification Record  
 WPS#: Welding Procedure Specification  
 PQR# will only be filled out upon request.

- 1 Document Information:** Fill out information providing details about supplier, part, and inspection facility.
- 2 Weld Description:** Document the weld description from the part print.
- 3 Weld Symbol:** Document the weld symbol from the part print.
- 4 WPS#:** Document WPS#.
- 5 PQR#:** Document PQR (If not prequalified).
- 6 Weld Spec:** Width and Length specifications.
- 7 Weld Spec Limits:** Document Weld check limits.
- 8 Gage:** Document gage type used to inspect welds.
- 9 Weld Check Results:** Document results from Weld measurements.
- 10 OK/Not OK:** Document if weld passed all part inspections.

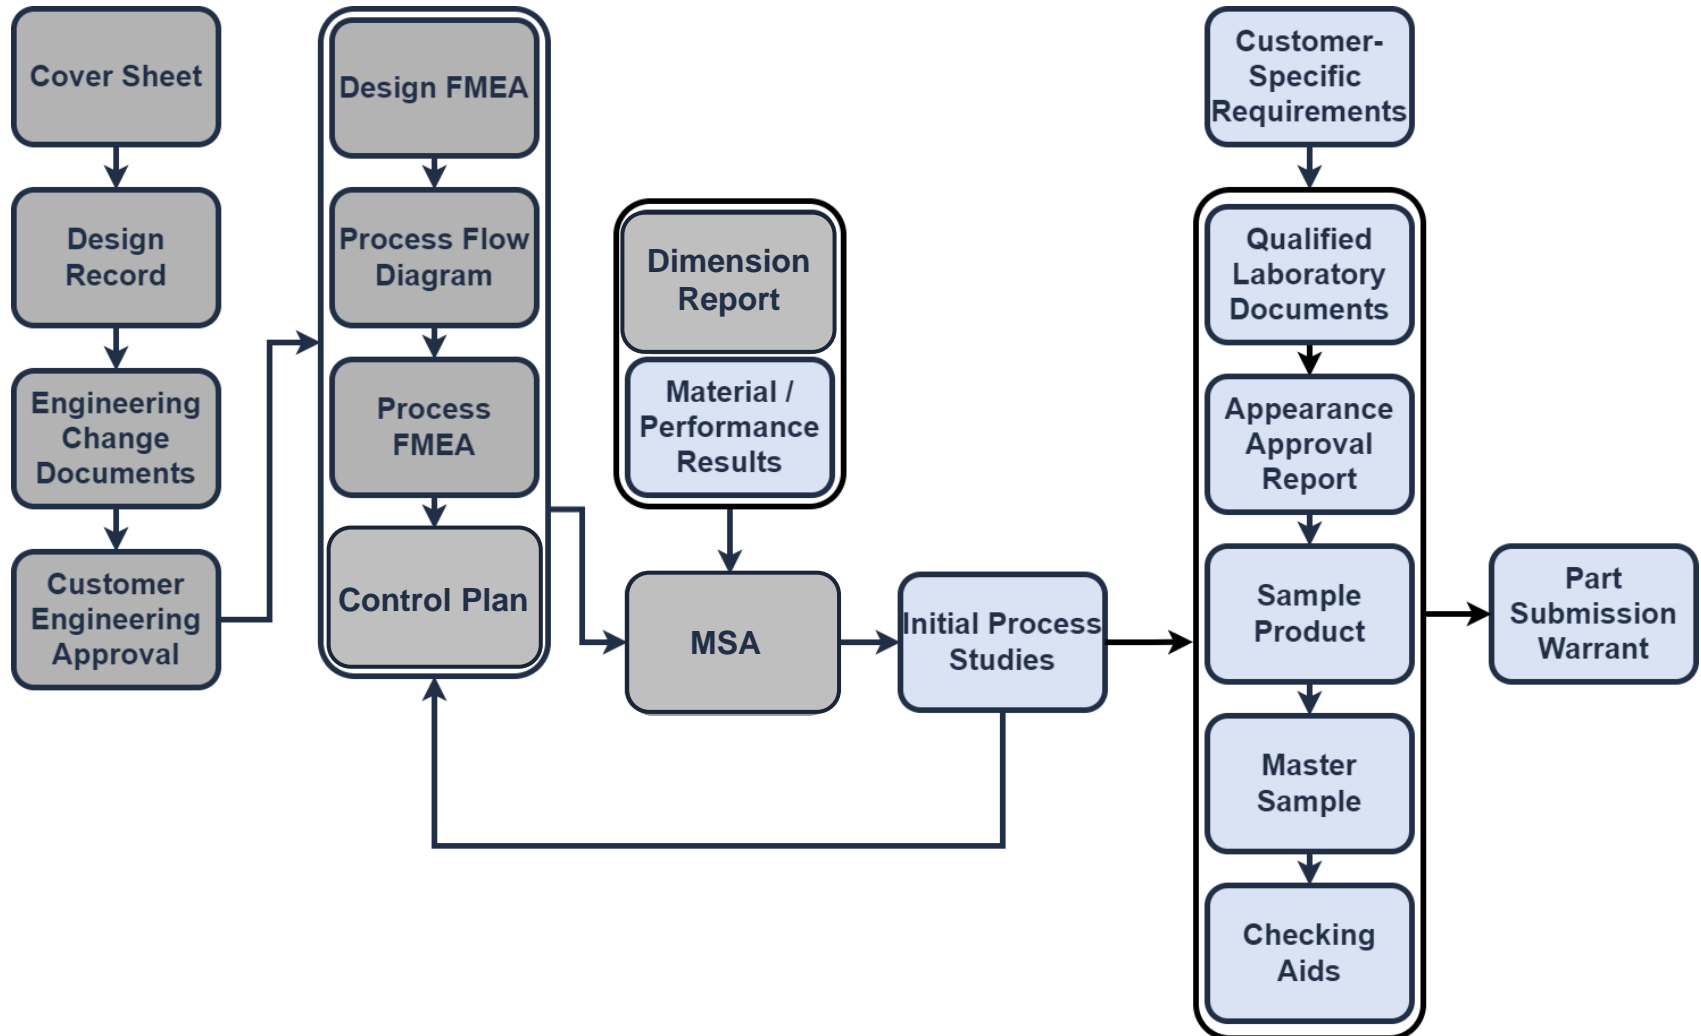

# 9. Dimensional Results

Element 9 Dimensional Test Results	
JLTV Requirements	Inadmissible
<p>100% dimensional inspection is required for a minimum of six (6) parts for each PPAP submittal, including subcomponents if the part or assembly is purchased at a higher level than the lowest level defined in the JLTV Technical Data Package and Computer Software Package. In the event that less than three parts are ordered, all parts shall be subject to 100% dimensional inspection.</p>	<p>Dimensional inspection only for one part.</p>
<p>Additional sample parts represent all process streams.</p>	<p>Some features checked in an over-inspection found to be out-of-tolerance.</p>
<p>All dimensional characteristics are accounted for (ref. ballooned prints).</p>	<p>Missing or incomplete dimensional characteristics.</p>
<p>CTQ features are identified.</p>	<p>Features found to be unaccounted for.</p>
<p>Zero non-conformances.</p>	
<p>For design authority suppliers, 100% of outline drawing characteristics, with actual values.</p>	
<p>If the product drawing relies upon the 3D CAD model to fully define the part, the PPAP shall include evidence that all measured samples conform to the geometry and associated GD&amp;T requirements defined by the 3D CAD model.</p>	

# JLTV PPAP Workflow

Next PPAP Element: 10. Material performance Test Results

# 10a. Material / Performance Test Results

**Definition:** The Material and Performance Test Results are a summary of all the tests performed on the part as specified in the drawing. It also includes the First Article Test (FAT) Report.

**Purpose:** These test results are important documentation to prove that the part meets all its performance expectations and can perform in the necessary application.

Material and Performance Test Results

		<b>MATERIAL AND PERFORMANCE TEST RESULTS</b> (ATTACH COPY OF ALL LAB TESTING DOCUMENTATION TO ELEMENT 17, RECORDS OF COMPLIANCE)				
SUPPLIER NAME: RGBSI Aerospace & Defense		<b>1</b>	PART NUMBER: 2584771

WSS-M2P177-C3 Corrosion Cycle	C3 -9 weeks rust > 1mm spread	1/1/2023	6	<b>EXAMPLE</b> 6 parts -9 week cyclical testing; Exhibits >1mm rust	X	

**1 Header:** Main information about the Material and Performance Test Results report.

**2 Material Spec. Number:** Specification number for test being performed.

**3 Specification/Limits:** Specifications to which parts are being tested.

**4 Test Date:** Date when test report was completed.

**5 QTY Tested:** Quantity of parts tested.

**6 Test Results:** Reported test results.

**7 OK/NOT OK:** Mark if parts passed testing.

# 10b. Material Certifications

**Definition:** Certifications of material performance that include the specification, limits, and results.

**How To:** Submit all material certifications referenced in the Dimensional Results and the Material Performance Test Results matrix. All material requirements called out in the Design Record shall have certifications and results. Material Certifications shall include a header box that includes the Drawing Number, Revision, and Characteristic note that it pertains to.

The test report shall not be reproduced except in full, without the written approval of Element Materials Technology. The results of the tests apply only to the samples received and the items tested. When statements of conformity (e.g. pass/fail) to a specification or standard are included in the test report, estimated uncertainty values or other machine correction factors are not used in assessing compliance to specification requirements. The recording of false, fictitious, or fraudulent statements or entries on the report may be punished as a felony under federal law. Our policy is to retain test components and sample remnants for 60 days from the report date, exclusive of cleanliness and corrosion test components, which will be retained for 30 days, after which time they will be discarded. If you would like to make alternate arrangements for disposition of the material, please let us know. This project shall be governed exclusively by the General Terms and Conditions of Sale and Performance of Testing Services by Element Materials Technology. In no event shall Element be liable for any consequential, special or indirect loss or any damages above the cost of the work.

# 10c. First Article Test Report Resources

**Definition:** The First Article Test Report is a summary of all the tests performed on the part as specified in the drawing, presented as CUI documentation in the AM General required format.

**How To:** For all Component First Article Testing (CFAT) please use the AMG CFAT Workbook (1AF0354) found on the Supplier resource website. Use the same document for all First Article Testing (FAT) as well.

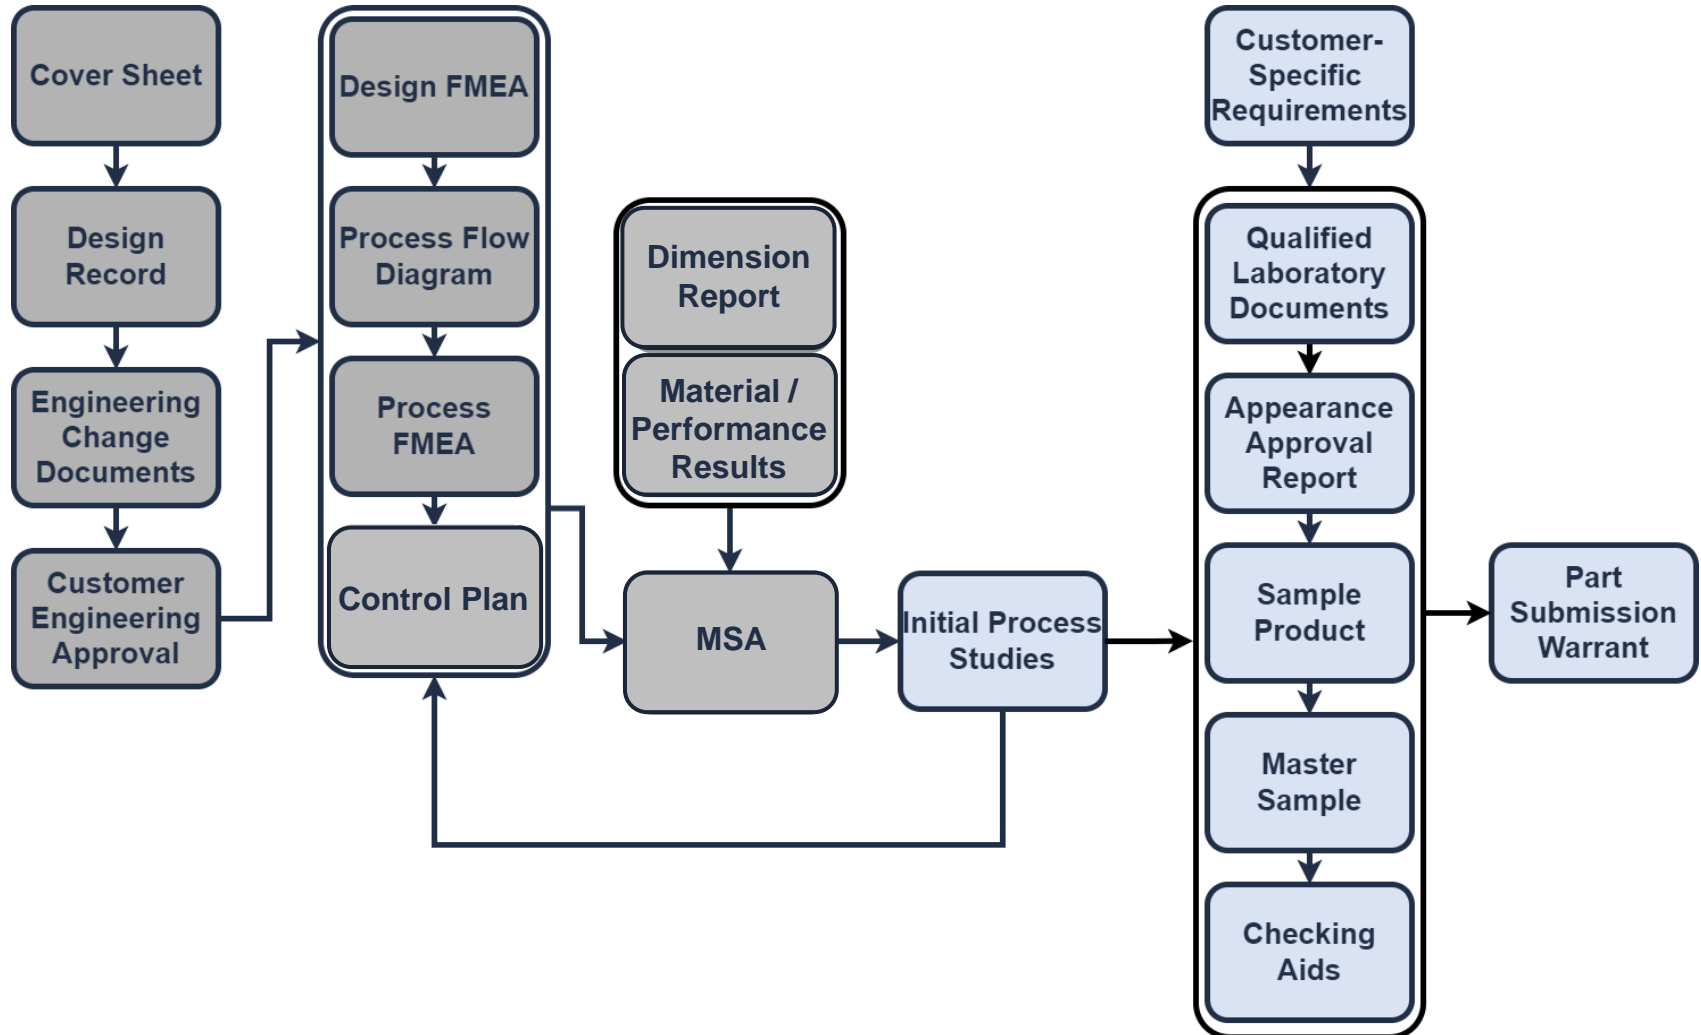

The image shows a template for a Controlled Unclassified Information (CUI) ATTENTION label. At the top, it says 'CUI' and 'AM GENERAL' with the tagline 'MISSION READY • FUTURE DRIVEN'. The main heading is 'CUI ATTENTION'. Below this, a white box contains the following text: 'Controlled by: PEO CS&CSS JPO JLTV', 'Controlled by: AM General, LLC', 'CUI Category(ies): CTI', 'Distribution Statement C', and 'POC: Matthew Filio, Matthew.Filio@amgeneral.com, (574-284-2979)'. Below the white box, another section titled 'ATTENTION' contains instructions: 'All individuals handling this information are required to protect it from unauthorized disclosure.', 'Handling, storage, reproduction, and disposition of the attached document(s) must be in accordance with 32 CFR Part 2002 and applicable agency policy.', and 'Access to and dissemination of Controlled Unclassified Information shall be allowed as necessary and permissible to any individual(s), organization(s), or grouping(s) of users, provided such access or dissemination is consistent with or in furtherance of a Lawful Government Purpose and in a manner consistent with applicable law, regulations, and Government-wide policies.' At the bottom, it says 'CUI' and includes a small reference to 'Standard Form 891 (11-10)'. The footer contains '1AF0354', 'Printed copy uncontrolled. Latest edition on AMG Intranet.', 'Page | 1', and '11/18/2023'.

# 10. Material / Performance Test Results

<b>Element 10 Materials Testing, Performance Testing, First Article Test (FAT) Report</b>	
<b>JLTV Requirements</b>	<b>Inadmissible</b>
<p>Compliance to the following are required to be documented, as applicable: Raw Materials Certifications, Performance Test Reports (which identify that all specified performance requirements on the Design Record have been demonstrated), Surface Finish Requirements, Marking/Labeling Requirements, Paint/Plating Requirements, Welding Documentation (necessary to demonstrate conformance to specified weld requirements such as procedure specifications, certifications, procedure qualification requirements, etc.).</p>	<p>Documentation for Raw Materials Certifications or Performance Test Reports are missing or incomplete.</p>
<p>Compliance information for any other material or material process (e.g. heat treatment) or performance test requirement specified in the Design Record but not included in the list above shall be included.</p>	
<p>The supplier is responsible for presenting Certificates of Conformance (COC) and Material Test Reports for Raw Materials for review.</p>	<p>Certificates of Conformance missing or incomplete.</p>

# JLTV PPAP Workflow

## Next PPAP Element: 11. Initial Process Studies

# 11. Initial Process Studies

**Definition:** Includes all SPC charts to prove processes producing critical/significant characteristics have stable variability.

**Purpose:** To ensure that the process can produce special characteristics that meet the organization's standard. **If Process is not stable**, the organization shall identify, evaluate and, wherever possible, eliminate special causes of variation prior to PPAP submission.

	<u>Idealistic</u> <i>Natural Variation</i>	<u>Realistic</u> <i>Process Centering</i>
<b>Capability</b> <i>Under Statistical Process Control</i>	$C_p = \frac{USL - LSL}{6\sigma_{c_p}}$	$C_{pk} = \text{Min} \left( \frac{USL - \bar{x}}{3\sigma_{c_p}}, \frac{\bar{x} - LSL}{3\sigma_{c_p}} \right)$ <small><math>\sigma_{c_p} \rightarrow \text{sample set}</math></small>
<b>Performance</b> <i>New Process</i>	$P_p = \frac{USL - LSL}{6\sigma_{p_p}}$	$P_{pk} = \text{Min} \left( \frac{USL - \bar{x}}{3\sigma_{p_p}}, \frac{\bar{x} - LSL}{3\sigma_{p_p}} \right)$ <small><math>\sigma_{p_p} \rightarrow \text{entire dataset}</math></small>

**Statistical Process Control:**  
The application of statistical methods to monitor and control the quality of a production process

$$\bar{X} = \frac{x_1 + x_2 + x_3 + \dots + x_n}{n}$$

$$\sigma = \sqrt{\frac{\sum(x - \bar{x})^2}{n - 1}}$$

# 11. Initial Process Studies

**How to:** Fill out the relevant information outlined below to document the supplier, part number, and tolerance of the dimension being measured.

Example

Element 11 Initial Process Studies (IPS)	
JLTV Requirements	Inadmissible
All defined KPCs are identified on the PFMEA, Process Flow Map, Control Plan and work instructions.	KPCs are not documented on PCP.
The requirements for significant production runs (PPAP Manual 2.1) and Quality Indices (PPAP Manual 2.2.11.2) shall be in accordance with PPAP Manual (Fourth Edition) Appendix H. All other PPAP Manual 2.2.11 requirements apply as written in the PPAP Manual (Fourth Edition).	
Producer can show evidence that SPC is being implemented for PW defined or self-selected KCs using control charts.	No evidence that control charts exist for either Customer/Producer KCs.
Initial Process Studies shall be performed on all special characteristics. All Critical Characteristics shall demonstrate a minimum CpK of 1.67, all Significant Characteristics shall demonstrate a minimum CpK of 1.33.	

## 12. *Qualified Laboratory Documentation*

**Definition:** Record certification / documentation of the testing facilities used to generate reports to satisfy JLTV PPAP testing / inspection requirements.

**Purpose:** Ensures that any identified laboratory is qualified for the type of measurements or tests conducted.

**How to:** Provide Certificates of Registration / Conformance as a part of the PPAP Package.

**Example documents to include: A2LA Lab Accreditation**

# 12. Qualified Laboratory Documentation

**How to:** If the Qualified Laboratory Documentation isn't required, suppliers must record on the Cover Page that Element 12 is Non-Applicable.

Latest Edition on AV&G Intranet. See <http://rida.amgeneralintranet.com>

Element 12 Qualified Lab Documents	
JLTV Requirements	Inadmissible
Inspection and testing for PPAP shall be performed by a qualified laboratory as defined by customer requirements (e.g., an accredited laboratory). The qualified laboratory (internal or external to the organization) shall have a laboratory scope and documentation showing that the laboratory is qualified for the type of measurements or tests conducted.	Missing or incomplete qualified lab documentation.
When an external/commercial laboratory is used, the organization shall submit the test results on the laboratory letterhead or the normal laboratory report format. The name of the laboratory that performed the tests, the date (s) of the tests, and the standards used to run the tests shall be identified.	

# 13. Appearance Approval Report

**Definition:** Certification that a part meets the customer's aesthetic and design requirements based upon for the physical appearance requirements.

**Purpose:** To ensure that the product appears to be in the correct condition with the specified finish, dimensions, and formality.

## Things to look for:

# 14. Sample Production Parts

**Definition:** Sample parts from the initial production run (PPAP run) with the exact number required being defined by the customer.

**Purpose:** To ensure that the product being produced on the line meets the customer's expectations and requirements.

**How to:** Fill out all the appropriate information on the Sample Part label and attach it to the sample part. Take pictures of the part and include them in the Sample Part tab.

## STOP!

### MOVE TO QUALITY HOLD

Instructions for using this label:  
This label is to be secured to all four sides of all the dunnage for the Quality Hold material. This label must be printed on YELLOW 8.5X11 paper so that it will be clearly visible.

First Shipment, New Revision	<input checked="" type="checkbox"/> Check box if first shipment of a new revision
Note:	

Of the initial 6 Sample Parts, 5 must be submitted for PTR, and the remaining part must be held as a Master Sample Part per Element 15.

### Example

### Element 14 Sample Parts

JLTV Requirements	Inadmissible
A PPAP must be performed on production parts.	Missing or incomplete PPAP.
Correct number of sample parts must be supplied as specified by the customer. PPAP Sample Parts Label required on all samples parts or boxes containing sample parts.	Incomplete number of sample parts.
	Sample Part Label missing or missing appropriate information (Part/Supplier/PO).

# 15. Master Sample

**Definition:** An official sample signed off by customer and supplier that is used to train operators on subjective inspections such as visual or for noise.

**Purpose:** Master sample required for each manufacturing cell, mold cavity, machine, etc.

- Used as a benchmark for process control and qualifying inspection procedures.
- Must be stored and identified with part number and approval date for the life of the product.

SUPPLIER NAME	1	PART NUMBER:	3
SUPPLIER CODE	2	PART NAME:	4
		ENGINEERING CHANGE LEVEL	5
Supplier is required to visually document the Master Sample (PPAP Parts):			
1.) Document how the parts are labeled. To include any date codes, vendor codes, etc. (if applicable)			
2.) Document the parts as a whole what they look like in the final state in which they are provided to AM General LLC.

Element 16 Checking Aids	
JLTV Requirements	Inadmissible
<b>If requested by the customer, the organization shall submit with the PPAP submission any part-specific assembly or component checking aid.</b>	<b>Failure to provide evidence of preventive maintenance.</b>
<b>Measurement system analysis studies, e.g., Gage R&amp;R, accuracy, bias, linearity, stability studies, shall be conducted in compliance with customer requirements.</b>	
<b>The organization shall certify that all aspects of the checking aid agree with part dimensional requirements.</b>	
<b>The organization shall document all released engineering design changes that have been incorporated in the checking aid at the time of submission.</b>	
<b>The organization shall provide for preventive maintenance of any checking aids for the life of the part.</b>	

# JLTV PPAP Workflow

## Next PPAP Element: 17. Customer Specific Requirements

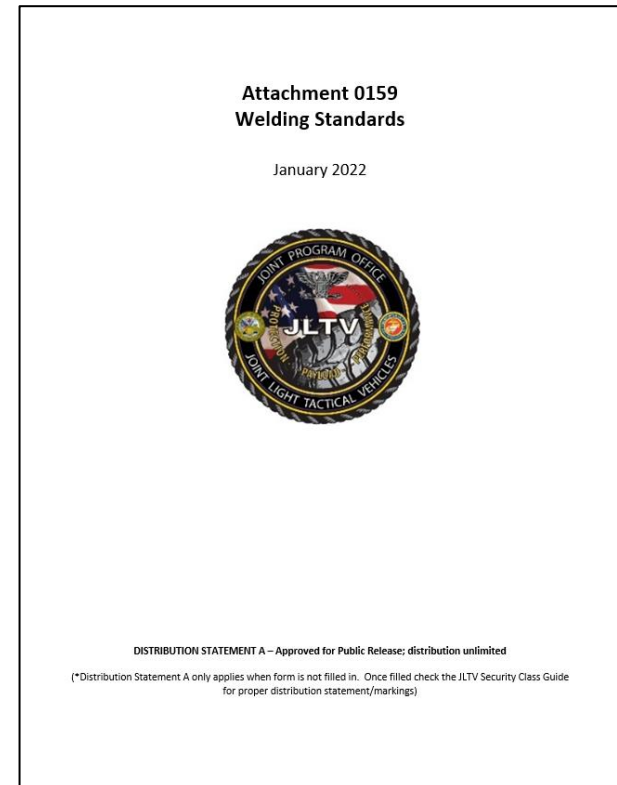

# 17. Records of Compliance for Customer-Specific Requirements

**Definition:** All documentation or records, including all test reports and test documentation, which satisfy fulfillment of customer-specified requirements.

**Purpose:** Ensures that all JLTV and commodity-specific requirements are met prior to part shipment.

**How to:** As approved by AM General Supplier Quality, ensure all commodity / process – specific JLTV requirements are met, including:

- AM General Supplier Quality Manual
  - AM General Fastener Requirements
  - AM General Weld Requirements
  - AM General Paint/Coating Requirements
  - AM General Armor Material Requirements
  - AM General Radiographic Inspection Requirements

# 17. Records of Compliance for Customer-Specific Requirements

**How to:** If no Customer-Specific Requirements are applicable, suppliers must record on the Cover Page that Element 17 is Non-Applicable.

1AR0003-06, PPAP Cover Sheet      Printed Copy Uncontrolled      Latest Edition on AXG Intranet Site (<http://ri-da.amgeneralintranet.com>)      Rev 2/30/2024

Element 17 Records of Compliance	
JLTV Requirements	Inadmissible
<p>The organization shall have records of compliance to all applicable customer-specific requirements. For bulk materials, applicable customer-specific requirements shall be documented on the Bulk Material Requirements Checklist.</p>	<p>Missing or incomplete documentation for customer-specific requirements.</p>
<p>Component First Article Test (CFAT) Documentation shall be included. CFAT documentation shall include a matrix summary of the results of each test (to include raw data), and any applicable calibration or certification documentation.</p>	

# 17. Records of Compliance for Customer-Specific Requirements

## CFAT requirements (Section 1.5 AM General SQM):

- CFAT requirements noted on part prints must be tested and met prior to PPAP approval.
- CFAT testing required on a minimum of 2 component samples for each test.
- CFAT units taken from 1st 10 component units produced.

## Interim PPAP approval:

- Supplier must submit both PSW and Interim Recovery Worksheet for materials in need of Interim approval.
- CFAT interim approval must be received prior to part point of assembly.
- JLTV Specific: Interim approval only granted for 120 days max.

## COTS (Commercial Off The Shelf):

- Supplier is expected to demonstrate / affirm part conformance with supporting PPAP documents or Certificates of Conformance (CoC).
- If all 18 PPAP elements are not available, the supplier shall provide the minimum PPAP elements (1, 2, 3, 9, 14, 15, 17, and 18).

# 17. Records of Compliance for Customer-Specific Requirements

## JLTV Welding Requirements – Attachment 1059: Welding Standards

- All welds shall be free of debris and defects in accordance with the documents listed in the tables below.
- A supplier may utilize alternate standards with AM General approval if equivalent or better quality and performance can be demonstrated and verified.
- Materials covered under MIL- DTL-46100, Armor Plate, Steel, Wrought, and High-Hardness (HH) or MIL-DTL-12560.
  - On any ballistic surface 5/8 inch (15.9mm) from the toe of the weld, at any location of weldment, the Brinell hardness shall not be lower than that permitted minimum hardness requirements if the materials are qualified under MIL-DTL-46100 or MIL-DTL-12560.

STRUCTURAL WELDING STANDARDS	
Structural Steel, Fusion Welding	American Welding Society (AWS) D1.1/D1.1M
Structural Aluminum, Fusion Welding and Friction Stir Welding	American Welding Society (AWS) D1.2/D1.2M
Structural Sheet Metal, Fusion Welding	American Welding Society (AWS) D1.3/D1.3M
Stainless Steel, Fusion Welding	American Welding Society (AWS) D1.6/D1.6M
Titanium, Fusion Welding	American Welding Society (AWS) D1.9/D1.9M
AUTOMOTIVE WELDING STANDARDS	
Steel, Resistance Spot Welding	American Welding Society (AWS) D8.1M
Steel, Arc Welding	American Welding Society (AWS) D8.8M
Steel, Laser Beam Welding	American Welding Society (AWS) D8.10M
Aluminum, Arc Welding	American Welding Society (AWS) D8.14M
Steel, Resistance Spot Welding	American Welding Society (AWS) D8.1M
ROBOTIC WELDING STANDARDS	
Specification for Robotic Arc Welding Safety	American Welding Society (AWS) D16.1M/D16.1
Guide for Components of Robotic Arc Welding Installations	American Welding Society (AWS) D16.2M/D16.2
Risk Assessment Guide for Robotic Arc Welding	American Welding Society (AWS) D16.3M/D16.3
Specification for the Qualification of Robotic Arc Welding Personnel	American Welding Society (AWS) D16.4M/D16.4
Robotic Arc Welding Personnel, Certification	American Welding Society (AWS) QC19

WELDING STANDARDS FOR OTHER APPLICATIONS	
Specification for Welding Procedure and Performance Qualification	American Welding Society (AWS) B2.1/B2.1M
Sheet Metal Welding Code	American Welding Society (AWS) D9.1/D9.1M
Specification for Welding Earthmoving, Construction, Agricultural, and Ground-Based Material Handling Equipment	American Welding Society (AWS) D14.3/D14.3M
Specification for Fusion Welding for Aerospace Applications	American Welding Society (AWS) D17.1/D17.1M
Specification for Resistance Welding for Aerospace Applications	American Welding Society (AWS) D17.2/D17.2M
Specification for Friction Stir Welding of Aluminum Alloys for Aerospace Applications	American Welding Society (AWS) D17.3/D17.3M
Recommended Practices for Resistance Welding	American Welding Society (AWS) C1.1M/C1.1
Carbon and Low-Alloy Steels, Resistance Welding	American Welding Society (AWS) C1.4M/C1.4
Friction Welding of Metals	American Welding Society (AWS) C6.2/C6.2M
MILITARY WELDING STANDARDS	
Armor and High Strength Steel, Fusion Welding	JLTV MIL-STD-3040A Interim (Attachment 0182)
Armor Grade Aluminum, Fusion Welding	MIL-STD-3057
BOILER AND PRESSURE VESSEL CODE	
Section IX qualification standard for welding and brazing procedures, welders, braziers, and welding and brazing operators	ASME Section IX

# 18a. Part Submission Warrant

**How to:** Check that the following information has been auto-filled correctly from the Information tab of the workbook. It is important that this information is accurate.

Part Name	1	Part Number	7	Revision	8
Drawing Number	2	Eng. Dwg. Change Level	9	Dated	10
Purchase Order No.	3	Tool Order No.	11	Dated	12
Scheduling Agreement	4				
Checking Aid / Test Equip. No.	5	Change Level / Dated	13	Weight (kg)	14
Additional Engineering Changes	6	Dated	15		

1

**Part Name (Nomenclature):** Descriptive title or label for a part.

2

**Drawing Number:** Unique identifier and revision letter assigned to a drawing.

3

**Purchase Order No.:** Unique identifying number assigned to the sample part's P.O.

4

**Scheduling Agreement:** Timing agreement between customer and supplier.

5

**Checking Aid / Test Equip. No.:** Apply If one is used for dimensional inspection.

6

**Additional Engineering Changes:** Engineering changes not yet incorporated.

7

**Part Number:** Unique number assigned to identify the sample part.

8

**Revision:** Latest iteration of the design record that part must comply to.

9

**Eng. Dwg. Change Level:** Approved level (revision) of addendums to the drawing.

10

**Dated:** Date that Eng. Dwg. Change Level was approved and established.

11

**Tool Order No.:** Identifier of any orders placed for tools involved with part.

12

**Dated:** Date of Tool Order No.

13

**Change Level / Dated:** Dated approved change of part.

14

**Weight (kg):** Weight of part individually, per kilogram.

15

**Dated:** Date of part change level.

# 18a. Part Submission Warrant

**How to:** Check that the following information has been auto-filled correctly from the Information tab of the workbook. It is important that this information is accurate. Also, check the correct boxes below the information.

Supplier Manufacturing Information				Customer Information	
Supplier Name <b>16</b>		Supplier Code <b>17</b>		Customer Name / Division <b>23</b>	
Street Address <b>18</b>				Buyer <b>24</b>	
City <b>19</b>	State <b>20</b>	Zip <b>21</b>	Country <b>22</b>	Application <b>25</b>	

**26** Does this part contain any restricted or reportable substances?  Yes  No  N/A

**27** Are plastic parts identified with appropriate ISO marking codes?  Yes  No  N/A

Unless otherwise stated, all JLTV parts will be marked N/A

**16** **Supplier Name:** Name of supplier that produced sample part.

**17** **Supplier Code:** Unique code (typically a Cage Code) identifying the supplier.

**18** **Street Address:** Location of supplier.

**19** **City:** City of supplier's location.

**20** **State:** State of supplier's location.

**21** **Zip:** Zip code of supplier's location.

**22** **Country:** Country of supplier's location.

**23** **Customer Name / Division:** Name / division of supplier of the submitted sample part.

**24** **Buyer:** Personnel / firm who contractually solidified customer / supplier relations.

**25** **Application:** Enter the model year, vehicle name, or engine, transmission, etc.

**26** **Reportable Substances:** Does this part or contain, restricted materials.

**27** **ISO Marking Codes:** Are there ISO marking codes for the plastic parts.

# 18a. Part Submission Warrant

**How to:** Check all the relevant boxes that explain the reason for the submission. Also, fill out the information for lot number and quantity.

## REASON FOR SUBMISSION (check at least one)

- 28** Initial Submission
- 29** Engineering Change(s)
- 30** Tooling: Transfer, Replacement, Refurbishment, Additional
- 31** Correction of Discrepancy
- 32** Tooling Inactive > than 1 year
- 33** Certificate of Conformance:

LOT #

QTY

- 34** Change to Optional Construction or Material
- 35** Sub-Supplier or Material Source Change
- 36** Change in Part Processing
- 37** Parts Produced at Additional Location
- 38** Other- please specify below

Per JPO Request, this box must show 6 parts to represent the 6 parts submitted as part of the PPAP package.

**28**

**Initial Submission:** PPAP is initiated due to an initial submission.

**29**

**Engineering Change(s):** PPAP is initiated due to an engineering change.

**30**

**Tooling:** PPAP is initiated due to new / refurbished tooling.

**31**

**Correction of Discrepancy:** PPAP is initiated due to a corrective action.

**32**

**Tooling Inactive > than 1 year:** PPAP is initiated due to tooling inactivity > 1 year.

**33**

**CoC:** PPAP is initiated due to the need of a Certificate of Conformance.

**34**

**Change to Construction or Material:** PPAP is initiated due to change of material.

**35**

**Sub-Supplier or Material Source Change:** PPAP is initiated due to supplier change.

**36**

**Change in Part Processing:** PPAP is initiated due to a process change.

**37**

**Parts Produced at Additional Location:** PPAP is initiated due to location change.

**38**

**Other:** PPAP is initiated due to a reason not listed here.

**39**

**Lot #:** Designated unique code identifying the lot produced under this PPAP.

**40**

**Qty:** Quantity of parts under this PPAP.

# 18a. Part Submission Warrant

**How to:** Check all the relevant boxes that explain the submission level and the submission results.

## Submission Level (check one)

- 41  Level 1 - Warrant only (and for designated appearance items, an Appearance Approval Report) submitted to customer.
- 42  Level 2 - Warrant with product samples and limited supporting data submitted to customer.
- 43  Level 3 - Warrant with product samples and complete supporting data submitted to customer.
- 44  Level 4 - Warrant and other requirements as defined by customer.
- 45  Level 5 - Warrant with product samples and complete supporting data reviewed at supplier's manufacturing location.
- 46  Level P - Warrant and other Prototype requirements as defined by customer.

1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

## Submission Results

The Results For: 48  dimensional measurements 49  material and functional tests 50  appearance criteria 51  statistical process package

These results meet all design requirements: 52  Yes 53  No (if No- Explanation Required)

<b>41</b>	<b>Level 1:</b> Checkbox for Submission of PPAP package.	<b>46</b>	<b>Level 5:</b> Checkbox for Submission of PPAP package.	<b>51</b>	<b>Statistical Process Package:</b> All statistical process package meet design requirements.
<b>42</b>	<b>Level 2:</b> Checkbox for Submission of PPAP package.	<b>47</b>	<b>Level P:</b> Checkbox for Submission of PPAP package used for prototypes.	<b>52</b>	<b>Yes:</b> Confirms that all results meet all design requirements.
<b>43</b>	<b>Level 3:</b> Checkbox for Submission of PPAP package.	<b>48</b>	<b>Dimensional Measurements:</b> All measurements meet design requirements.	<b>53</b>	<b>No:</b> Confirms that all results do not meet all design requirements.
<b>44</b>	<b>Level 4:</b> Checkbox for Submission of PPAP package.	<b>49</b>	<b>Material and Functional Tests:</b> All measurements meet design requirements.		
<b>45</b>	<b>Checkboxes:</b> For customer to check for which elements are requested for submittal.	<b>50</b>	<b>Appearance Criteria:</b> All appearance criteria meet design requirements.		

# 18a. Part Submission Warrant

**How to:** Make sure to read the declaration before filling out the rest of the information. Fill the rest out with accurate information and sign.

## Declaration

I affirm that the samples represented by this warrant are representative of our parts which were made by a process that meets all AM General specific requirements, drawings, specifications and meet all PPAP 4th Edition Requirements. I also certify that documented evidence of such compliance is on file and available for review.

I further affirm these samples are made from specified materials on regular production tooling with no operations other than the regular production process produced at a rate of  pcs/hr. I have clearly written any exceptions from this declaration below.

## Explanation / Comments

## List Molds / Cavities / Production Processes:

## Organization Authorized Signature

Date

Print Name

Phone No.

Fax

Title

Email

**54**

**Rate:** Affirms the rate of production in parts per hour.

**55**

**Comments:** Allows supplier to provide a brief explanation or comment.

**56**

**List:** A list of molds, cavities, and production processes used for submitted part.

**57**

**Signature:** Signature of authorized personnel from supplier's organization.

**58**

**Date:** Date of organization Authorized Signature.

**59**

**Print Name:** Printed name of organization authorized personnel.

**60**

**Title:** Title of organization authorized personnel.

**61**

**Phone No.:** Phone number of organization authorized personnel.

**62**

**Email:** Email of organization authorized personnel.

**63**

**Fax:** Fax number of organization authorized personnel.

# 18a. Part Submission Warrant

**How to:** The last part of the form is only for the customer to fill out. It will record the PPAP approval type and will be signed by the customer's Supplier Quality Engineer. Ensure the information is filled out accurately.

For Customer Use Only	
PPAP Warrant Disposition:	<input type="checkbox"/> <b>64</b> Approved <input type="checkbox"/> <b>65</b> Rejected <input type="checkbox"/> <b>66</b> Interim Approval
Supplier Quality Engineer Signature	<div style="border: 1px solid black; height: 20px; width: 100%;"></div> <div style="border: 1px solid black; height: 20px; width: 100%;"></div>
Print Name	
	Comment: <div style="border: 1px solid black; padding: 5px; width: 100%; text-align: center;"><b>69</b></div>

**64**

**Approved:** Checkbox to identify customer approves PPAP package.

**65**

**Rejected:** Checkbox to identify customer rejects PPAP package.

**66**

**Interim Approval:** Checkbox to identify customer approves PPAP package for part's process for current run of production only.

**67**

**Signature:** Signature from Supplier Q.E. personnel.

**68**

**Printed Name:** Printed name of Supplier Q.E. personnel.

**69**

**Comment:** Supplier Q.E. may include comments in this cell.

# 18a. Part Submission Warrant

All boxes must have a response. If a response is not applicable, write N/A.

**Part Submission Warrant**

MISSION READY • FUTURE DRIVEN

Part Name	Base, Mounting	Part Number	2584771	Revision	E

Checking Aid / Test Equip. No.	AMG123456	Dated	5/8/2023		
Additional Engineering Changes	N/A				

Do Technical Requirements contain an IPA/IPI/FAT/QAP?  Yes  No  N/A

Supplier Manufacturing Information		Customer Information	
Supplier Name	Supplier Code	Customer Name / Division	
RGBSI Aerospace & Defense	BCGWG	AMG	
Street Address		Buyer	
2850 Presidential Drive		John Smith	
City	State	Zip	Country
Fairborn	OH	45324	United States
			Bracket on Ship

Ensure information is filled correctly. Check the correct boxes for the PPAP. Make sure to sign the PSW before submitting.

Does this part contain any restricted or reportable substances?  Yes  No  N/A  
 Are plastic parts identified with appropriate ISO marking codes?  Yes  No  N/A

**REASON FOR SUBMISSION (check at least one)**

<input checked="" type="checkbox"/> Initial Submission	N/A	Change to Optional Construction or Material
<input type="checkbox"/> Engineering Change(s)	N/A	Sub-Supplier or Material Source Change
<input type="checkbox"/> Tooling: Transfer, Replacement, Refurbishment, Additional	N/A	Change in Part Processing
<input type="checkbox"/> Correction of Discrepancy	N/A	Parts Produced at Additional Location
<input type="checkbox"/> Tooling Inactive > than 1 year	N/A	Other- please specify below
<input type="checkbox"/> Certificate of Conformance:	LOT # N/A	QTY N/A

**Submission Level (check one)**

<input type="checkbox"/> Level 1 - Warrant only (and for designated appearance items, an Appearance Approval Report) submitted to customer.
<input type="checkbox"/> Level 2 - Warrant with product samples and limited supporting data submitted to customer.
<input checked="" type="checkbox"/> Level 3 - Warrant with product samples and complete supporting data submitted to customer.
<input type="checkbox"/> Level 4 - Warrant and other requirements as defined by customer.
<input type="checkbox"/> Level 5 - Warrant with product samples and complete supporting data reviewed at supplier's manufacturing location.
<input type="checkbox"/> Level P - Warrant and other Prototype requirements as defined by customer.

**Submission Results**

The Results For:  Dimensional measurements  material and functional tests  appearance criteria  statistical process package  
 These results meet all design requirements:  Yes  No (If No: Explanation Required)

**Declaration**

I affirm that the samples represented by this warrant are representative of our parts which were made by a process that meets all AM General specific requirements, drawings, specifications and meet all PPAP 4th Edition Requirements. I also certify that documented evidence of such compliance is on file and available for review.  
 I further affirm these samples are made from specified materials on regular production tooling with no operations other than the regular production process produced at a rate of 20 pcs/hr. I have clearly written any exceptions from this declaration below.

Example

1A0003 18, PSW Rev 11/21/2023

Printed Copy Uncontrolled.  
 Latest Edition on AMG Intranet Site (<http://r1de.amgeneralintranet.com>)

Element 18 Part Submission Warrant (PSW)	
JLTV Requirements	Inadmissible
<b>Approved Warrant with both Supplier/Producer Management Approval signature and AM General signature.</b>	<b>Warrant missing supplier/producer signature.</b>
<b>Evidence of all elements of PPAP completed (for Submission Level 3).</b>	<b>For the Submission Level 3 - no evidence of complete elements.</b>
<b>For Interim Approvals: Warrant should include an Action Plan to achieve full approval with target dates and owners for each action.</b>	<b>No action plan for interim approval levels.</b>
<b>PSW must have all fields completed, any areas not applicable should be indicated as such.</b>	<b>Warrant has missing or incomplete information fields.</b>

# 18b. Interim Approval

**Definition:** Supplier completes the Interim Approval Worksheet to verify fulfillment of all AIAG/AMG / JLTV production and shipment requirements for Interim PPAP Approvals.

**Purpose:** To show conformance with all guidance, requirements, standards, and specifications laid out in AM General's Interim Approval requirements for PPAP.

**How to:** Supplier provides details for all required fields in the worksheet and signs, verifying that all JLTV Interim Approval submission requirements are met for the PPAP part / assembly. This sheet should be submitted alongside element 18, the Part Submission Warrant

Example

**AM GENERAL**  
MISSION READY • FUTURE DRIVEN

Interim Approval Worksheet

<b>Supplier Name</b> RGBSI Aerospace & Defense	<b>Part Name</b> Base Mounting
<b>Supplier Code</b> SC006	<b>Part Number</b> 2864771
<b>Revision Date</b> MM-DD-YYYY	<b>Revision</b> 4 <b>Date</b> 12/18/2002
<b>Interim Expiration Date</b> MM-DD-YYYY	<b>Submission Level</b> 1 (Level 3)
<b>Application</b> Bracket on Ship	

**REASON FOR REQUEST** \*\*NOTE: Use ALT tabs to go to a new line in the box below

Ensure information is filled correctly. Check the correct boxes for the PPAP. Make sure to sign the Interim Approval before submitting.

Issue	Action Plan	Completion Date
(Item #, Part, Supplier, Process, Tooling, Capacity, Set-up, ...)		

Input details on issues, action plans, and completion dates

**WHERE APPLICABLE, ARE INTERIM ISSUES ADDRESSED ON THE EARLY PRODUCTION PRE-LAUNCH CONTROL PLAN? (e.g. 100% inspection, rework, temporary operations) Please explain below.**

**Organization Authorized Signature** [Signature here] **Date** MM-DD-YYYY

**Print Name** Jane Doe **Phone (616) 333-4347** **Fax** (531) 323-4347

**Title** Supplier Quality Engineer **Email** janedoe@gmail.com

# 18b. Interim Approval

**How to:** Check that the following information has been auto-filled correctly from the Information tab of the workbook. It is important that this information is accurate. Any boxes that do not auto-fill must be filled out manually.

AM GENERAL		Interim Approval Worksheet	
MISSION READY ★ FUTURE DRIVEN			
Supplier Name	RGBSI Aerospace & Defense	Part Name	Base, Mounting
Supplier Code	8CGW6	Part Number	2584771
Resubmission Date	MM-DD-YYYY	Revision	E Dated 11/18/1980
Interim Expiration Date	MM-DD-YYYY	Submission Level	Level 3
Application	Bracket on Ship		

1

**Supplier Name:** Name of the supplier that produced the part.

2

**Supplier Code:** Unique code (typically a Cage Code) identifying the supplier.

3

**Resubmission Date:** Date of resubmission after Interim Approval.

4

**Interim Expiration Date:** Expiration Date for Interim Approval.

5

**Application:** Enter the model year, vehicle name, or engine, transmission, etc.

6

**Part Name (Nomenclature):** Descriptive title or label for a part.

7

**Part Number:** Unique number assigned to identify the sample part.

8

**Revision:** Latest iteration of the design record that part must comply to.

9

**Dated:** Date that Eng. Dwg. Revision Level was approved and established.

10

**Submission Level:** PPAP Level being submitted after Interim.

# 18b. Interim Approval

**How to:** Provide details on how the interim issues are being addressed on the Pre-Launch Control Plan. Then fill in contact information for the authorized personnel submitting the Interim Approval Request.

WHERE APPLICABLE, ARE INTERIM ISSUES ADDRESSED ON THE EARLY PRODUCTION PRE-LAUNCH CONTROL PLAN? (e.g. 100% inspection, rework, temporary operations) Please explain below. <span style="float: right;">1</span>			
Organization Authorized Signature	*Signature Here* 2	Date	MM-DD-YYYY 7
Print Name	Jane Doe 3	Phone No.	(555)123-4567 5
		Fax	(555)123-4567
Title	Supplier Quality Engineer 4	Email	janedoe@gmail.com 6 8

1

**Issues Addressed:** Detailed description of how issues are addressed.

2

**Organization Authorized Signature:** Signature of authorized personnel from supplier's organization.

3

**Print Name:** Printed name of organization authorized personnel.

4

**Title:** Title of organization authorized personnel.

5

**Phone No.:** Phone number of organization authorized personnel.

6

**Email:** Email of organization authorized personnel.

7

**Date:** Date of organization Authorized Signature.

8

**Fax:** Fax number of organization authorized personnel.

# 18b. Interim Approval

**How to:** The last part of the form is only for the customer to fill out. It will record the PPAP approval type and will be signed by the customer's Supplier Quality Engineer. Ensure the information is filled out accurately.

For Customer Use Only	
1 Interim Worksheet Disposition:	<input type="checkbox"/> Approved <input type="checkbox"/> Rejected
2 Supplier Quality Engineer Signature	Comment: 4 <input type="text"/>
3 Print Name	

- 1 **Interim Worksheet Disposition:** Check boxes for "Approved" or "Rejected" Interim Status.
- 2 **Supplier Quality Engineer Signature:** Signature of authorized personnel from customer's organization.

- 3 **Print Name:** Printed name of organization authorized personnel.
- 4 **Comment:** Supplier Q.E. may include comments in this cell.

# Lessons Learned

The following examples are commonly occurring issues found during the first round of PPAP Reviews:

Element	Issue
Design Records	x2 Callouts not Bubbled on the Drawing
Control Plan	Characteristics, tools, gages not listed
Dimensional Reports	Wrong tolerances listed for the note
Material Test Reports	Material Certifications not directly linked to characteristics on the Drawing
Master Sample Part	Part labels missing Cage code requirement on the drawing
Part Submission Warrant	Fill in N/A on empty boxes, include quantity of 6 for PPAP package
PFD/PFMEA/CPLAN	Misalignment between documents

# ***Discussion / Q&A***

# *PPAP Is A Living Process*

**PPAP is NOT a “Check the Box” Process; It is the Way We Do Business.**

The various PPAP Elements, especially the FMEAs, are a data base of lessons learned that apply to all similar products, both current and new. (UPI & Transfer)

Per SAE J 1739 the supplier must have a risk priority number reduction (RPN) process. Every RPN change drives a change to the PPAP documentation.

Every corrective action, either internal or external, is accompanied by a change to the PFMEA & Control Plan and in many cases the DFMEA, Flow Plan, and Process Readiness Documentation.
